JOHN R. RUSSELL
The University of Rochester

MILROY N. STEWART

The pages of the Proceedings are open mainly for the publication of original articles on any aspects of the Natural Sciences of Western New York and the adjacent areas; for the publication of articles by the scientists of the region; and for biographical articles on the scientists of this area or those who have contributed to our knowledge of the Natural History of Western New York. Other articles will be considered by the Publications Committee. Further, the Proceedings will publish the official news, notes and activities of the Academy, its Sections and Members. Authors are requested to submit their articles to any member of the Publications Committee. Members should submit News and Notes to the Secretary of the Academy or the Secretaries of the various sections. Authors may obtain reprints by placing the order when returning proofs, and are furnished 25 reprints free of charge. For larger numbers than this, author obtains reprints at cost.

The proceedings are published irregularly, but it is intended to produce one volume of six numbers (about 300 pp.) every few years. Subscription price \$7.50 per volume and \$1.50 per issue. For volumes prior to 10, procure the list of available back issues, and their prices, from the Librarian.

CORRESPONDENCE CONCERNING SUBSCRIPTIONS, SINGLE NUMBERS, MISSING ISSUES AND EXCHANGES SHOULD BE ADDRESSED TO:

ACKNOWLEDGMENTS

To the following I extend my very special thanks for their determinations of a large proportion of the many hundreds of collections recorded in this paper. Determinations not otherwise noted were made by the author.

Prof. Theodore L. Bissell, Department of Entomology, University of Maryland, College Park, Md.

Dr. V. F. Eastop, British Museum (Natural History), London, England.

Dr. M. E. MacGillivray (MacG in text), Research Station, Canadian Department of Agriculture, Fredericton, New Brunswick, Canada.

Dr. A. Tom Olive (ATO in text) Department of Biology, Wake Forest College, Winston-Salem, N. C.

Prof. John O. Pepper (JOP in text), 413 Ridge Ave., State College, Penna.

Miss Louise M. Russell (LMR in text), Entomology Research Division, ARS, U. S. Department of Agriculture, Washington, D. C.

Dr. David R. Smith, Entomology Research Division, ARS, U. S. Department of Agriculture, Washington, D. C. for determinations of ants.

Dr. Clyde F. Smith (CFS in text), Department of Entomology, North Carolina State University, Raleigh, N. C.

Dr. Archie N. Tissot (ANT in text), Department of Entomology, University of Florida, Gainesville, Fla.

Dr. Stanwyn G. Shetler, Department of Botany, U. S. National Museum, Washington, D. C. for determinations and verifications of many plants and their names.

Several others who have made only a few determinations are each given credit in the appropriate places in the text.

I acknowledge with many thanks a grant from the Grace H. Griswold Fund of the Department of Entomology, Cornell University to aid in the preparation of the final manuscript of this paper.

INTRODUCTION

The first attempt to present a comprehensive annotated inventory of the aphids known to occur in New York was a paper by the author entitled "A List of the Aphids of New York" (Proceedings of the Rochester Academy of Science, Vol. 10, No. 6:289-428, 1963). In it are given detailed records of the distribution of roughly 350 species of aphids occurring on 700 food plants. These were based on collections and published records through 1960.

This present supplement contains records of all available collections, as far as they have been determined, during the 6-year period of 1961-1966. Some older records are also included. Data is given for 290 aphids specifically determined. There are 9 others determined with a query and still 14 others determined only to the genus*; 80 of the aphids are new to New York. The collections are recorded from 638 plants; 256 of them are new aphid food plants for the State; 91 new genera are involved. It is believed that aphids have never before been recorded from a number of the plants elsewhere.

There are now known to occur in New York a total of over 430 aphids on over 950 plants.

Slides representing most of the collections are deposited in the Cornell University Collection.

An attempt has been made to cite the individual records for each species geographically and chronologically as was done in the 1963 List.

SOURCES OF INFORMATION

The following are those who have made most of the collections upon which this Supplement is based. My sincere thanks are due to each and all of them for the great amount of time and careful effort which, in the aggregate, this work has involved.

Lambert W. All (LWA in text), while a technical assistant to Dr. Pechuman made about 90 collections during 1963 and 1964. These were at or near Ithaca and at his home in Stamford, Delaware County and on nearby Mt. Utsayantha (3212 ft. elev.), an area almost unknown for aphids.

H. Lou Gibson (HLG in text), of the Eastman Kodak Co. at Rochester, and also Editor of these Proceedings, made over 350 collections from 1962 through 1966. These were mostly from the wild flower garden he constructed on a suburban lot at his home in Irondequoit. This includes 10 habitats: desert; field; limey prairie; hedgerow; dry woods;

* There are a number of records from different plants in several genera of aphids, especially *Aphis*, *Dactynotus*, and *Macrosiphum*, which could not be specifically determined. It is not possible to say how many species these may represent so that these are not included in the total number of aphids in this paper.

shaded, mildly acid woods; wet acid, deeply shaded woods; meadow; acid and marl bogs; and marsh. Each habitat is about 60 sq. ft. except the first 4 which are about one-third that area. Over 300 species of wild plants are in this garden. Several were imported as flowers, trees and seeds from other states through nurserymen. There are also three larger beds for the commonly cultivated flowers. Haulm is burnt each year. It is especially revealing to note that in this small area over 70 different species of aphids were collected. Many of these are new to New York, one species has not been collected elsewhere in the state, and one new species was found. Several other collections, involving over 30 plants (most of them new for the state), were made but could not be determined.

Daniel González, Ph.D. (Gonz in text), while a graduate student in the Department of Entomology, Cornell University, collected aphids in yellow water pans (MT in text) at four locations in Oswego County in 1963 and 1964 in connection with a study of the transmission of lettuce mosaic virus. The determination of this large number of winged aphids was by John O. Pepper who was able to name specifically about 70 species, several of which were new to New York. Mr. H. Gilmore Rinard, a graduate student in entomology at Cornell, who had also been collecting aphids in yellow pans (mostly as yet unidentified) has been good enough to further clarify some of the records sent me by González.

This study has been summarized in the following paper: "Aphid sampling efficiency of Moericke traps affected by height and background." by D. González and A. W. Rawlins in [Jour. Econ. Ent. 61(1):114-119, 1968]. Sixty-eight species of aphids in 17 genera were identified. Twenty-eight percent of the total number were *Myzus persicae* (Sulzer), the green peach aphid. The next most common species were *Brevicoryne brassicae* (Linnaeus), the cabbage aphid; *Rhopalosiphum maidis* (Fitch), the corn leaf aphid; and *Brachycolus atriplicis* (Linnaeus), the boat-gall aphid.

George V. Johnson (GVJ in text), Entomology Research Division, ARS U. S. Department of Agriculture, collected on plants at Farmingdale, L. I. and several nearby localities, between 1948 and 1962. During 1960-1963 he and his assistants made many collections at Farmingdale in yellow pans. Mr. Johnson has kindly supplied me with all the data on these many collections. All determinations were made by Louise M. Russell.

Roy Latham (RL in text), the veteran naturalist, continued to collect intensively throughout the 6-year period but in the later years confined his attention more nearly to near his home at Orient, L. I. and to the nearby swamps at Greenport. In this period he made about 2200 collections which brings his grand total up to about 3400 collections. It might be added that his food plants are always authoritatively determined since he is an expert botanist. The year of Mr. Latham's birth is in error in the NYL. It is 1881.

Chris E. Olsen (CEO in text), of West Nyack, continued to do a little collecting locally, as his health permitted, into 1964. He died on May 30, 1965 at the age of 85. His collections of aphids in New York spanned a period of 51 years!

LaVerne L. Pechuman, Ph.D. (LLP in text), also continued to collect. In July 1962 he moved from Lockport to Ithaca to become an Associate Professor and Curator of Insects at Cornell University. He made about 335 collections.

Edwin A. Rundlett (EAR in text), continued to collect on Staten Island through 1963, following which pressure of other matters prevented his continuance. During the 3 years he made over 75 collections from plants and caught at least 1500 alatae in two yellow water pans (MT in text) in his garden. Only a relatively few of these latter have been determined.

George O. Saile, Jr. (GOS in text), of Poughkeepsie, has made several collections, mostly in his home garden, during the past 4 or 5 years. Several of these have proved to be of considerable interest.

F. William Zettler, Ph.D. (Zett in text), while a graduate student in Cornell University, collected winged aphids from sticky black traps set out in kidney bean fields at Ithaca, North Lansing and Canastota during 1964 and 1965. At the same time Raymond Louie and Ann M. Olson, both graduate students in the Department of Plant Pathology at Cornell University, were collecting winged aphids from sticky traps and yellow water pans respectively. Prof. John O. Pepper made determination of the aphids as far as it was possible to do so specifically. For further details on these studies see "Collections of winged aphids from black sticky traps compared with collections from bean leaves and water-pan traps." by Zettler, F. W., Raymond Louie, and Ann M. Olson [Jour. Econ. Ent. 60(1):242-244, Feb. 1967]. Also see: "Winged aphids caught in traps in bean fields in Central New York." by F. W. Zettler [Jour. N. Y. Ent. Soc. 60(5):1320-1323, Oct 1967].

Others. One or two to several collections each have been made by several others. Their names are given in the text in connection with the records of their collections.

*LIST OF APHIDS**

* An asterisk indicates that the aphid is an addition to the 1963 New York List.

Acyrthosiphon barri (Essig)
see *Acyrthosiphon scarioli* Pass.

Acyrthosiphon dirhodum (Walker)
see *Metapolophium dirhodum* (Walker)

Acyrthosiphon macrosiphum (Wilson) Long-legged Serviceberry Aphid
(Formerly in *Macrosiphum*)

ROCHESTER 26 Oct 1963, 4 "pupae", on *Amelanchier stolonifera* (HLG coll—MDL det with some doubt).

Acyrthosiphon pelargonii (Kaltenbach) Geranium Aphid
STAMFORD 7 Oct 1963, a number in vial, on *Pelargonium hortorum* (LWA coll). In NYL, Miss Griswold is quoted as saying "*P. hortorum*, the commonest of all geraniums, has never had these aphids on them." DANBY 2 Ju 1964, 3 alatae, 3 apterae, on *Geranium maculatum* (LLP coll).

Acyrthosiphon pisum (Harris) Pea Aphid
(Formerly in *Macrosiphum*)

ROCHESTER 2 Aug 1963, on *Lathyrus latifolius* (HLG coll—Eastop det). OSWEGO Co. 1964, in MT (Gonz coll—JOP det). LOCKPORT 4 Aug 1960, on sweet pea (LLP coll—ATO det). OSWEGO LAKE 26 Jl 1964, on *Medicago sativa* (LWA coll). NORTH LANSING 15 Ju-7 Jl 1964, 41 alatae and 28 Jl-11 Aug, 86 alatae, in sticky traps (Zett coll—JOP det). ITHACA 28 Ju-16 Aug and CANASTOTA 1 Jl-19 Aug, 52 alatae, all in 1965, in sticky traps (Zett coll—JOP det). LUDLOWVILLE 19 Sept 1964, on *Melilotus alba* (LLP coll).

SI: FIRE ALARM 30 Aug 1961, 1 alata, in MT (EAR coll—ANT det). CASTLETON CORNERS 22 May 1962, in MT (EAR coll—ATO det).

LI: FARMINGDALE 4-13 Oct, 6 alatae and 20 Oct-2 Nov 1960, 2 alatae; 15-22 May, 1 alata and 22-31 May 1961, 3 alatae; 12-16 Aug, 1 alata and 26-30 Aug 1963, 1 alata, all in MT (GVJ coll—LMR det). ORIENT 8 Jl 1961, in flowerheads of red clover (RL coll); 16 Ju 1962, in MT (RL coll—ATO det); 4 Jl 1962, on *Pisum sativum*; 24 Ju and 25 Ju 1964, on *Lathyrus (maritimus) japonica* (RL coll). GREENPORT 3 Jl 1965, on *Vicia cracca* and 17 Jl 1965, on *Trifolium arvense* (RL coll).

Acyrthosiphon (Rhodobium) porosum (Sanderson)
Yellow Rose Aphid

MacGillivray [Ann. Ent. Soc. Am. 61(2): 356, Mar. 1968] states that

Miss Patch misidentified the following records in the NYL as *Macrosiphum pseudodirhodum* and that they refer to *porosum*: ITHACA, Apr., May, Nov., 1926 on rose in greenhouse (Griswold coll).

ROCHESTER 16 Jl 1963, on *Rosa carolina* (HLG coll—Eastop det).

LI: ORIENT 6 Jl, on *Fragaria virginiana* and 12 Jl 1962, 1 aptera, on *Bidens frondosa* (RL coll—LMR det); 21 Oct 1963, 4 apterae, on *Hydrangea hortensis* (RL coll—LMR det with query).

Acyrtosiphon pseudodirhodum (Patch)

Formerly in *Macrosiphum*

MacGillivray [Ann. Ent. Soc. Am. 61(2): 356, 357, Mar. 1968] confirms the determination of the Hansberry record (under *Macrosiphum*) on *Spirea latifolia* in the NYL.

COOXROX FOREST, 12 Aug 1965 (MacG coll and det).

Acyrtosiphon scarioli (Nevsky)

(Formerly *Macrosiphum barri* Essig)

OSSWEGO Co 1964, in MT—Farm F, 6 alatae, Farm J, 1 alata (Gonz coll—JOP det).

LI: FARMINGDALE 26–30 Aug, 1 alata, and 3–6 Sept 1963, 2 alatae, in MT (GVJ coll—LMR det). ORIENT 16 Sept 1946, on *Lactuca sativa*; 9 Sept 1961, 9 Sept, 8 Oct 1963, and 22 Sept 1964, on *L. sativa* (RL coll).

In NYL P. 358 is the following note: *Macrosiphum* sp. SI: NEW BRIGHTON 30 Aug 1943, on flowering parts of *Lactuca serriola* var. *integrata* (C. S. Tuthill coll—det Mason) who states, "I have seen this species before on *Lactuca* in the East. It is probably undescribed." This undoubtedly refers to Essig's *barri* which was not described by him until 1949.

Roy Latham wrote me on 22 Feb 1965 from his farm at Orient, LI, as follows about this aphid: "In reference to *Macrosiphum barri*, I again go back to 1963. During that long period of beautiful Indian Summer through October and November this destructive gray-green aphid was at its best here. The garden lettuce was loaded with them on all parts of the plants from the ground to the flowers and seeds. I made several collections that fall. It was one of the species active latest into the season and I think the last one on herbaceous plants that year. The collections of this species in 1964 were of mediocre material and they did not develop wings in as great numbers as they did in 1963. I remember it common in our gardens long before I collected aphids for you." (He started in 1946).

Acyrtosiphon sibericum (Mordwilko)

SI: NEW SPRINGVILLE 18 Nov 1960, apterae, on *Urtica dioica* (EAR coll).

Acyrtosiphon solani (Kaltenbach)

Foxglove Aphid

(Formerly placed in *Myzus* and *Aulacorthum*)

ITHACA 21 Ju 1938, on *Trifolium pratense* in the greenhouse (Griswold coll).

coll). ROCHESTER 16 Nov 1963, on cult *Phlox* sp. (Eastop det); 26 Oct 1963 and 24 Aug 1965, on *Anemone virginiana*; 24 Aug 1965 and 26 Sept 1966, on *Spiranthes cernua* (MacG det); 31 Jl 1965, 1 mature aptera, on *Senecio vulgaris* (LMR det); 21 Aug 1965, on *Cypripedium acaule* and *C. candidum* (MDL, LMR det); 1 Oct 1966, on *C. reginae*; 2 Oct 1966, on *C. parviflorum*—(all HLG coll). (None were found on the foxgloves in his garden.)

LI: WANTAUGH 8 Apr 1949, on *Gerbera* sp. (CVJ coll—LMR det). BABYLON 13 May 1949, on Easter lily and May 2 1965, on Easter lily and okra (GVJ coll—LMR det). Farmingdale 9–14 Ju 1961, 1 *alata*, in MT, (GVJ coll—LMR det). GREENPORT 11 Sept 1963, apterae only, on *Lysimachia terrestris* (RL coll); 9 Jl 1961, apterae, in curled leaves of *Rubus frondosus* (RL coll—JOP det). ORIENT 6 Jl, on *Viola arvensis*, 13 Jl, on *Marrubium vulgare*, 15 Jl, on *Erigeron annuus*, 21 Jl, on tomato, 14 Jl, on leaves and flowers of *Althea rosea*, 14 Jl, on leaves of *Molucella laevis*, 23 Nov, a few on *Lamium maculatum* attended by the ant *Prenolepis imparis* (Say) as det by M. R. Smith—all 1961 (RL coll—JOP det); 24 Jl 1965, 1 mature aptera, on leaf of *Salpiglossus gloxiniflora*; 27 Jl 1965, 2 apterae, on *Lythrum latifolia* (RL coll). ORIENT 27 Nov 1963, 2 mature apterae, on *Digitalis purpurea* (RL coll); 30 Oct 1966, 1 aptera, on China aster (RL coll); 8 Jl 1966, 1 aptera, on *Abrus precatorius* (RL coll—MDL det with query).

ORIENT 14 Jl 1946, 2 apterae, on *Matricaria suaveolens* (RL coll)—this slide was originally cited in the NYL in error as *Myzus persicae*.

***Amphorophora** sp.

LI: GREENPORT 11 Sept 1963, 1 aptera, on *Lysimachia terrestris* (RL coll).

*?**Amphorophora agathonica** (Hottes)

American collections formerly determined as the European Raspberry Aphid, *A. rubi* (Kaltenbach) are now tentatively determined as *A. agathonica* Hottes, which is distinct from *A. rubi*. Data for collections previously determined as *rubi* are as follows: GENEVA 21 Jl 1961, on *Rubus strigosus* (R. H. Converse coll—LMR det). NORTH COLLINS 21 Jl 1961, on *R. strigosus* (Converse coll—LMR det). FREDONIA 21 Jl 1961, on *R. occidentalis* vars. (Converse coll—LMR det). ROCHESTER 1 Jl 1962, on *R. strigosus* and 10 Aug 1962, a few on stems of *R. odoratus* (HLG coll—LMR det).

LI: RIVERHEAD 22 Jl 1933 on *Rubus* sp. (MDL coll—ANT det); record omitted from NYL. HUNTINGTON 7 Jl 1960, on *R. strigosus* (Converse coll—LMR det). GREENPORT 9 Jl 1961, on tip of stems of *R. phoenicolasius* (RL coll—JOP det with query).

Amphorophora ampullata Bucktonsee *Amphorophora laingi* Mason**Amphorophora crataegi** (Monell)see *Macrosiphum crataegi* (Monell)**Amphorophora laingi** Mason

Dr. Hille Ris Lambers believes this should be called *A. ampullata* Buckton.

ROCHESTER 24 Aug 1965, on *Shortia galacifolia* and on *Osmunda cinnomea* (HLG coll—MacG det with query); LOCKPORT 25 Ju 1966, a heavy infestation with much honey dew, on *Pteretis nodulosa* in a home garden (LLP coll—LMR det).

LI: GREENPORT 3 JI 1965, 1 alata, in curled top of *Onoclea sensibilis* (RL coll).

Amphorophora rossi Hottes & Frison

LI: GREENPORT 30 Ju 1962, 9 JI 1963 and RIVERHEAD 4 JI 1963, on *Geum canadense* (RL coll). ORIENT 5 JI 1966, on *G. virginianum* (RL coll).

Amphorophora sensoriata Mason

LI: RIVERHEAD 22 JI 1933, on *Rubus* sp. (MDL coll—ANT det); record omitted from NYL.

Amphorophora sonchi (Oestlund)see *Nasonovia lactucae* (L.)**Anoecia corni** (Fabricius)

OSWEGO Co 4 Sept 1964, alatae, in MT (Gonz coll—JPO det). ROCHESTER 9, 16 Oct 1966, many alatae and young, on *Cornus stolonifera* (HLG coll). ITHACA 12 Ju–16 Aug 1965, 5 alatae, in sticky traps (Zett coll—JOP det). NORTH LANSING 9 Ju–16 Aug 1965, 3 alatae and CANASTOTA 1 Jl–19 Aug 1965, 2 alatae, in sticky traps (Zett coll—JOP det). LUDLOWVILLE 9 Sept 1966, on *C. rugosa* (LLP coll).

SI: CASTLETON CORNERS 16 Nov 1961, 3 alatae, from laundry on the line (EAR coll).

LI: GREENPORT 20 Oct 1962, on *C. amomum* (RL coll). ORIENT 18 Oct 1961, on *C. florida*; 2 Nov 1961, many alatae with many small young, on *C. amomum* attended by the ant *Prenolepis imparis* (Say) as determined by D. R. Smith; 20 Sept, 8, 20 Oct 1963, 20 Oct 1964, 2 alatae in flight, and 13 Sept 1965, on *C. amomum*, many alatae in each coll and many small pale young (RL coll).

***Anoecia oenotherae** Wilson

SI: FIRE HOUSE, 1 alata, in MT 18 Sept 1961 (EAR coll—ANT det).

Anoecia querci Fitch

Oswego Co 4 Sept 1964, alata, in MT (Gonz coll—JOP det); Oswego 14 Oct 1966, 1 alata accidental, on alfalfa (A. G. Wheeler coll). ITHACA 12 Ju-16 Aug 1965, 1 alata, in sticky trap (Zett coll—JOP det).

SI: FIRE HOUSE 12 Sept 1961, 1 alata, in MT (EAR coll—ANT det).

LI: ORIENT 24 Sept 1961, on roots of *Eleusine indica* (RL coll)

***Anoecia setariae** Gillette & Palmer

NORTH LANSING 14 Jl-17 Aug 1964, 33 alatae and ITHACA 9 Ju-16 Aug 1965, 24 alatae, all in sticky traps, (Zett coll—JOP det).

Anuraphis bakeri (Cowen)

see *Nearctaphis bakeri* (Cowen).

Anuraphis carotae (Koch)

see *Semiaphis dauci* (Passerini).

Anuraphis helichrysi (Kaltenbach)

see *Brachycaudus helichrysi* (Kaltenbach).

Anuraphis maidiradicis (Forbes)

see *Brachycaudus maidiradicis* (Forbes).

Anuraphis menthaericidis (Cowen)

see *Brachycaudus menthaericidis* (Cowen).

Anuraphis middletoni (Thomas)

see *Brachycaudus middletoni* (Thomas).

Anuraphis rumexicolens (Patch)

see *Brachycaudus rumexicolens* (Patch).

Aphis spp.

For the following collections it has not been possible to determine the aphids specifically. The records are included, however, since in almost every case no *Aphis* has been specifically recorded elsewhere in this paper on these plants:

WEST NYACK 10 Oct 1960, apterae and alatae, on *Eupatorium coelestinum* forma *album* (Olsen coll); this record was omitted from the text of the NYL but is in its food plant list. BEDFORD LAKE PARK, near Mt. Kisco, 11 Aug 1960, apterae, on *Impatiens capensis* (Graham coll). ROCHESTER 1 Jl 1962, on *Phlox pilosa* and *Epilobium angustifolium*; 23

J1 1962, many alatae, apterae, on *Prunus salicina*; 31 J1 1965, about 20 apterae, on *Cypripedium reginae* and *C. candidum*; 26 Sept 1966, on *C. reginae* (all HLG coll). ITHACA 13 Sept 1963, a few apterae, on *Epipactis* (*Serapias helleborine*) *latifolia* (E. M. Raffensperger coll).

LI: RIVERHEAD 27 Oct 1949, on *Sisymbrium officinale* (RL coll)—in NYL food plant list but aphid not in text. ORIENT 19 Ju 1947, apterae, alatae, on *Steironema (Lysimachia) ciliatum*, (RL coll)—in NYL food plant list but aphid not in text; 14 Aug 1959, on *Veronica longifolia* (RL coll)—in NYL food plant list but aphid not in text; 31 Sept on *Amaranthus caudatus*, 10 J1, apterae common, on underside of leaves of *Lysimachia clethroides*; 5 J1, on terminals of *Crataegus oxyacantha* (all 1962 RL coll—MacG det); 23 Ju 1964, on *Sanicula marilandica*, 2 J1 1962, apterae, alatae, on curled tops of *Atriplex arenaria*, 17 Oct 1963, on leaves and stems of *Galinsoga parviflora*, 20 J1 1963, on *Erigeron canadensis* (MacG det), 31 J1 1965, apterae, on *Helianthus annuus*, 23 Oct 1965, on *Foeniculum vulgare*, 10 J1 1962, apterae, on underside of leaves of *Lysimachia clethroides*, 13 Oct 1965, many on caraway, 1 Aug 1965, on *Mollugo verticillata*, 12 Ju 1963, on *Agrostis tenuis*, on leaves and stems; 17 Oct 1963, alatae, apterae on *Galinsoga parviflora* (MacG det); 7, 14 J1 1966 on *Centranthus ruber*, 8 J1 1966, on *Lysimachia clethroides*, 28 Oct 1966, 1 aptera on *Venidium fastuosum*, 8 J1 1966 on *Abrus precatorius*—all RL coll. ***Aphis craccae** Linnaeus

CROWN POINT, ESSEX Co. 21 Aug 1966, on *Vicia cracca* (LMR coll and det). WELLESLEY ISLAND, JEFFERSON Co., 31 Aug, 1 Sept 1966, on *Vicia* sp. (LLP coll—LMR det); densely clustered on the terminal growth, principally on the stems but with a few on leaves and seed pods; the majority of the specimens in the collections were oviparous females but a few males and viviparous females were present.

For a fuller account see “*Aphis craccae* Linnaeus, an aphid newly discovered in the United States.” by Louise M. Russell [CEIR 16(43):1021–1923, Oct 28, 1966].

Aphis craccivora Koch

Cowpea Aphid

Oswego Co 3, 10 Jl, 21, 28 Aug, 4 Sept 1964, alatae, in MT (Gonz coll—JOP det). ROCHESTER 13 Aug 1965, very abundant and wilting tips of *Robinia pseudoacacia* and 16 Oct 1965, a few on *Hibiscus palustris* (HLG coll). ITHACA 3 Jl 1963, many apterae, on *Robinia pseudoacacia* (LWA coll) and 22 Jl 1966 (LLP & Teskey); 29 Aug 1962, on alfalfa (L R Nault coll—CFS det).

Smith writes of the Nault collection: "Dr. Eastop of the BM checked this material on alfalfa and thinks it is the same as *Aphis craccivora* simply being a hot weather form; however, he stated that it looks quite different to him and he would like a large series of specimens including winged forms if at all possible."

ITHACA "We sampled 100 alfalfa plants from plots of DuPuits, Vernal, and Kansas varieties each week during the summer of 1966. This black aphid was never abundant and not a problem in the field but was found during the entire summer and early fall. Our first record of the aphid is on 20 June and the last is a single specimen on 13 November. A few specimens were taken each week during October. Few alatae were ever seen. On alfalfa in the greenhouse the aphid did quite well and was a definite problem. At times the stems became heavily covered." (A G Wheeler, Jr. and J T Hayes, Department of Entomology, Cornell University).

NORTH LANSING 19 Aug 1965, on *Robinia pseudoacacia* (LWA coll). PORTLAND POINT, LUDLOWVILLE, 6 Sept 1965, on *Kochia scoparia* (LLP coll). NORTH LANSING 15 Jl-7 Aug 1964, 4 alatae from sticky traps (Zett coll—JOP det). WESTPORT 19 Jl 1963, apterae, on *Vicia* sp. (LLP coll). WEST NYACK early Jl 1963, many on stems of a large *Laburnum anagyroides* (Olsen coll—LMR det). POUGHKEEPSIE 11 Jl 1965, 27 Ju 1966, many apterae, several alatae, on *Wistaria* sp. (GOS coll).

LI: FARMINGDALE 1-9 Ju (1), 1-9, 16-23 Aug, 1 each, 6-20 Oct (1) 1961, in MTs (GVJ coll—LMR det). SOUTHHOLD, on *Robinia pseudoacacia*, very common on a small tree in a swamp; 20 Jl, on tips of twigs of *R. hispida* 1961 (JOP det). PECONIC 20 Jl, common on stems and flowers of lima beans; 28 Jl, on *R. pseudoacacia*; 28 Jl, on *Oenothera biennis* 1961 (JOP det). MATTITICK 23, 28 Jl 1961, on *Verbascum blattaria* (JOP det). Aphis crataegifoliae Fitch

see *Brachycaudus crataegifoliae* Fitch

Aphis fabae Scopoli**Bean Aphid**

Following is a list of the 47 food plants of the bean aphid recorded in this paper. Of these, 31 plants (*) were not mentioned at all in the NYL nor were 12 of their genera (**). Of the plants, 29 have not been previously recorded for *A. fabae* in New York. *A. fabae* has been collected on only 16 of the plants more than once. The numeral in parenthesis preceding the plant name indicates the number of collections from that plant.

***Albizia julibrissin* (mimosa), **Amaranthus caudata*, **A. gracilis*, **A. retroflexus*, (*) *Arctium minus* (common burdock), **Atriplex arenaria*, *A. patula* **Beta saccharifera* (sugar beet), *B. vulgaris* (common beet), ***Borago officinalis* (borage), (9) *Calendula officinalis* (pot marigold), **Calycanthus florida*, *Capsella bursa-pastoris* (shepard's purse), *Celastrus orbiculata*, (6) *C. scandens*, ***Celosia argentea cristata*, **(2) *Celtis occidentalis* (hackberry), ***Centranthus ruber*, (8) *Chenopodium album* (lambsquarters), *C. ambrosioides* (Mexican-tea), **C. hybridum* (maple-leaved goosefoot), *Cirsium arvense* (Canada thistle), (2) *Cynara cardunculus* (cardoon), **Dahlia juarezi*, (2) *Dahlia pinnata*, **(2) *Digitalis purpurea* (foxglove), *Euonymus* sp. *(2) *E. elatus* (4) *E. europaeus*, **Eupatorium perfoliatum* (boneset), (2) *Fagopyrum sagittatum* (buckwheat), ***Gaillardia* (*aristosa*) *pulchella* (blanketflower), *(5) *Galium aparine* (cleavers), ***Hosta ventricosa* (funkia), *Ligusticum scoticum* (Scotch lovage), ***Linum grandiflorum* (flowering flax), *(2) *Lychnis alba* (white cockle), **Matricaria inodora* (scentless mayweed), *M. matri- carioides* (*suaveolens*) (pineappleweed), (2) *Osmorrhiza claytoni* (sweet jarvil), *O. longistylus* (anis root), **Papaver rhoes* "strain" (Shirley poppy), (2) *Phaseolus coccineus* (scarlet runner), *Philadelphus coronarius* (mockorange), *Polianthes tuberosa* (tuberose), ***Portulaca oleracea* (common purselane), *Rheum rhaboticum* (rhubarb), ***Salvia officinalis* (garden sage), *Sium suave* (water parsnip), **Sonchus oleraceus* (sow-thistle), **Stellaria jamesiana*, (3) *Tropaeolum majus* (common nasturtium), **Urtica procera* (nettle), ***Verbesina encelioides* (golden crownbeard), **Viburnum acerifolium* (mapleleaved viburnum), **Vicia faba* (broad bean), **(2) *Wistaria floribunda*.

Detailed records of *Aphis fabae* are as follows:

OSWEGO Co alatae, in MTs, J1 3-6, 10; 21, 28 Aug, 4 Sept 1964 (Gonz coll—JOB det). ROCHESTER 1 J1 1962, apterae, on *Albizia julibrissin* (HLG coll); 11 Nov 1963, on *Petunia* sp. (HLG coll—Eastop det); 30 Oct 1966 on *Euonymus europaeus* (HLG coll) 16 Nov 1963, alatae and oviparae, on *Phlox* cult (JILG coll—Eastop det with query). MARYLAND 7 Sept 1963, on *Chenopodium album* (LWA coll). CANASTOTA 3 Sept 1963, a large collection from sugar beets (Muka coll—JOP det). CAYUGA Co 15 Oct 1965, on sugar beets (? coll—CFS det). ROCHESTER 26 Sept 1965 and 1 Oct 1966, on *Calycanthus florida* (HLG coll—MDL det); Gibson notes: "This is the first year (1965) I have seen aphids on this bush."

LUDLOWVILLE 18 Aug 1964, on *Urtica (procera) gracilis*, "very abundant on one plant in a large patch of this nettle" (LLP coll—MacG det); 21 Aug, on *Amaranthus retroflexus* (LLP coll). ITHACA 20 J1 1962 (? coll—CFS det); Sept 1934, on *Polianthes tuberosa* (MDL)—plant omitted from Plant List in NYL; 7 Ju 1963, on *Euonymus* sp. (LLP coll); 7 J1 on *E. alatus* and 1 J1 1963, on *Arctium minus* (LWA coll); 19 Aug 1965, on *Chenopodium album* (Zett coll—JOP det).

SI: CASTLETON CORNERS 4 Aug 1962, on cult nasturtiums (EAR).

***Aphis gerardiae** Thomas

LI: GREENPORT 23 Aug 1964 and 11 Aug 1965, on *Gerardia (Aureolaria) flava* (RL coll—LMR det).

Aphis gossypii Glover Cotton or Melon Aphid

Aphis circzeandis Fitch n. sp. in 13th Rept. pp. 501–502, 1870.

About this species Fitch here writes "Many years ago, upon the sweet, liquorice-flavored leaves of the *Galium circzeans* I met with an interesting aphid. It occupied the underside of the leaves, and by its punctures it caused each side of the leaf to turn backwards until it became doubled together resembling a pod, with the aphids enclosed inside, as if they represented the seeds in th pods. This was the middle of June."

Regarding Fitch's species, A. C. Baker [Proc. Ent. Soc. Wash. (20); 130–131, 1918] states "11 June 1952 Fitch collected 5 specimens in 'DUGWAY Woods' SALEM . . . this name appears to be a synonym of *gossypii* Glover." If Baker's synonym was correct (and Miss Russell tells me it is) Fitch's collection is, of course, an earlier one for *gossypii* since Glover did not describe *gossypii* until 1877.

The next earliest record of *A. gossypii*, named as such, in NEW YORK appears to be the collection at FREDONIA 25 Jl 1905 by Hayhurst on "cantaloupe vines" (ANT det). Following this is CENTRAL PARK, NYC 2 Jl 1909, on *Capsella bursa-pastoris* [Gillette coll—Jour. Econ. Ent. (3), 5:404, 1910]. Olsen records it from MASPETH, L. I. 26 Oct 1914, on *Hibiscus syriacus*. The next available records are in 1918 from NYACK 25 Jl, on okra and FLUSHING, L. I. 18 Jl 1918, on tomato and cucumber and FAR ROCKAWAY, L. I. Sept "cucumbers utterly destroyed" (Chittenden in USDA's Insect Pest Survey records).

During the 1920's and 1930's, there are a number of records of the occurrence of this aphid usually of its injuries to various vegetables and ornamentals on LONG ISLAND and other parts of the State in the files of USDA's Insect Pest Survey.

In this supplement *A. gossypii* is recorded from 29 plants. Of these 17 are new for *gossypii* in New York and 3 of their genera are new. For ready reference the plants are here listed in alphabetical order by botanical names. Those new for *gossypii* in NY are marked with an asterisk. Only 3 of them have been collected on more than once; the number of times is indicated by a numeral in parens.

**Amaranthus deflexus*, **Anagallis arvensis*, **Althaea rosea* (hollyhock), **Aquilegia vulgaris* (European columbine), **Boehmeria cylindrica*, *Catalpa bignonioides*, *Centranthus ruber*, *Citrullis vulgaris* (watermelon), *Cucumis melo cantalouensis* (cantaloupe), *C. sativa* (cucumber), **Curcurbita ficola* (a gourd), *C. maxima* (squash), *C. moschata* (cushaw), *Daucus carota*, **Dodecatheon meadia*, *Eupatorium purpureum*, **Galium aparine*, **G. circzeans*, **Gnaphalium polycephalum*, *Gossypium obtusifolium* (oriental cotton), (4) *Hibiscus esculentus* (okra), (3) *H. syriacus* (rose-of-sharon), **Impatiens balsamina*, **L. epidium virginicum*, *Martynia louisiana* (devil's claws), *Papaver somniferum* (common poppy), *Phaseolus lunatus* (lima bean), **Portulaca oleracea*, **Saxifraga philadelphicum*, *Scutellaria* sp., **Senecio aureus* (common groundsel), **Trollius* sp. (globeflower).

Aphis hederae Kaltenbach

Ivy Aphid

Formerly identified in USA as *pseudohederae*

Theobald

All collections on *Hedera helix*. ITHACA 25 Oct 1965, many (E. M. Raphensperger coll). POUGHKEEPSIE 21 Oct 1961, a few (MDL coll); 25 Dec 1964, a number of alatae, apterae (MDL, DDL and GOS coll); 24 Nov 1966 (GOS coll).

LI: FARMINGDALE 12 Mar 1958 (GVJ coll LMR det). EAST MARION

24 Oct 1963 (RL). ORIENT 1 Oct, 23 Nov 1961; 6 May, 16 Sept 1962; 11 Oct 1963; 28 Oct 1964; 22 Sept 1965; 6 Nov 1966 (all RL coll.).

This Supplement is based on records of aphids collected only through 1966. However, Dr. L. L. Pechuman observed what I believe to be an unprecedented "outbreak" of the ivy aphid and I am making an exception in order to put this occurrence on record. This aphid is almost always found in relatively small numbers on only the tender terminal tips of English ivy and in the late fall. The only exception of which I know as to its more abundant occurrence is in Delaware where P. P. Burbutis observed it as abundant throughout the NEWARK area on new terminals in Nov and Dec 1966. (Del. Agr. Exp. Sta. Tech. Bull. 363:6, 1967).

On 18 May 1967, a neighbor of Dr. Pechuman's in LUDLOWVILLE phoned to say that quantities of small black insects were crawling on the outside of his house. Upon examination, these proved to be the ivy aphid. The infestation came from ivy on a brick chimney outside of the house and extended the height of the chimney—about 25 feet. Dr. Pechuman believes the infestation must have been present for some time before he saw it. It lasted to mid-June when it tapered off. The aphids caused yellowing and distortion of the leaves; terminal growth was covered solidly with the aphids; many aphids seemed to be stuck in their own honey dew. In addition to many aphids leaving the ivy and crawling on the outside of the house, many moved to dandelions at the base of the chimney where they were attended by the ant, *Formica fusca* L. (det Merle Wing). Parasitism was not heavy but many *Lysephlebius testaceipes* were flying around and some were reared. Some hyperparasits were obtained but were not determined. A couple of species of Syrphid flies were noticed ovipositing and there were many Syrphid eggs and larvae. Some of the pupae were parasitized. Many larvae, pupae and adults of *Adalia bipunctata* were present. (Messrs. A. G. Wheeler and J. T. Hayes, Dept. Ent., Cornell University, made the observations on ants, parasites and predators.)

Aphis helianthi Monell

OSWEGO Co 3, 10 Jl, 21, 28 Aug, 4 Sept 1964 alatae, in MT (Gonz coll—JOP det).

SOUTHOLD 9 Sept 1962, on *A. pulchra*; 28 Ju, 12 Jl 1963, on *A. syriaca* (RL coll.).

Regarding a collection he made at MATTITUCK 3 Aug 1962, Latham writes on 15 Aug as follows: "Stanley Smith, Botanist in the State Museum was out and asked me to go afield with him. So I broke away for one day. We went to MATTITUCK and GREENPORT vicinities. With one exception, I saw no aphids all day except on one host which was spectacular. This was

Asclepias pulchra. This swamp milkweed was growing in a border about 10 feet wide along the edge of a pond and about 200 feet in length. Every plant in the whole border, apparently so far as I could determine, was covered, except the leaves and flowers, from the top to midway down the stem with big golden yellow aphids which were shining in the sun. It was a glorious sight. The aphids were as thick as they could cling to stems, petioles and peduncles—just millions of them. A sight one would never forget."

Aphis oenotherae Oestlund

LI: ORIENT 11 Jl 1961, apterae, alatae, in top of plants of *Oenothera parviflora* var. *oaksiana* (RL coll—JOP det); 26 Ju 1964, on *Oenothera biennis* (RL coll—LMR det). GREENPORT 23 Jl 1961, in flower heads of *O. biennis* (RL coll—JOP det).

see *Brachycaudus rumexicolens* (Patch)

Aphis rumicis Linnaeus

Dock Aphid

OSWEGO Co alatae, in MTs 3, 10 JI; 21, 28 Aug 1964 (Gonz coll—JOP det). ITHACA 23 May 1963, on *Rumex crispus* (LWA coll). NORTH LANSING 15 Ju-7 Aug 1964, 1 alata, in sticky trap in bean field (Zett coll—JOP det).

SI: CASTLETON CORNERS 2 Nov 1961, on *R. crispus* attended by the ant *Prenolepis imparis* (Say), (EAR coll).

LI: FARMINGDALE 26-30 Aug 1963, 1 alata; 15-22 May, 1 alata; 26 Ju-4 JI, 3 alatae; 23-31 Aug, 1 alata; 8-14 Sept, 1 alata 1961, all in MT (GVJ coll—LMR det). AQUEBOG 25 May 1961, on *R. obtusifolius* and BAYVIEW 10 Ju 1962, on *R. obtusifolius*. SOUTHOLD 9 JI 1963, on *R. crispus*. GREENPORT 24 Ju 1962 and 23 Ju 1963, on *R. verticillata*; 3 Ju 1962, on *R. crispus*; 19 Ju 1962 and 2 Ju 1963, on *R. obtusifolius*. ORIENT 24 May 1961, on *R. crispus*; 6 Ju 1966, on *R. obtusifolius*; 3 Ju 1963 and 29 May 1965, on *R. crispus*; 6 Ju 1966 on *R. obtusifolius* attended by the ant *Prenolepis imparis* (Say). All LI colls except FARMINGDALE are by RL.

On 17 Ju 1962, Roy Latham wrote me: "Why is the black aphid more common on *Rumex crispus* than on *R. obtusifolius*? Even when the two species are growing together it is always the curled dock which is selected by the aphids. I know that people commonly eat the curled dock for greens and never touch the broad-leaved species for food. I wonder if there is a difference in taste that even the insects can detect?"

Aphis sambucifoliae Fitch

OSWEGO Co alatae, in MTs 3, 10 JI; 28 Aug; 4 Sept 1964 (Gonz coll—JOP det). ITHACA 6 Oct 1933 a drift alata, on *Morus alba* (Griswold coll—LMR det) omitted from NYL.

LI: GREENPORT 5 Nov 1961, on *Sambucus* sp. (MDL det); 9 JI 1961, many on *Sambucus* sp. (JOP det). BAY VIEW 8 Oct 1961, alatae, apterae, on *S. canadensis*. ORIENT 31 JI, 20 Aug, 31 Dec, 28 Sept 1961, on *S. canadensis* (mostly JOP det); 6 Ju, 30 May 1962, on *S. canadensis*; 1 Nov 1965 a number of alatae with some very small young and many ants, *Aphaenogaster fulva* (Roger) and 20 Ju 1966 many apterae (one of these had 4 cornicles)*, on *S. nigra*—all LI colls by RL.

* See "An aphid with four cornicles" by M. D. Leonard—Proc. Ent. Soc. Wash. 68(4):320, 1966.

Commenting on this aphid Roy Latham wrote me on 25 Sept 1966: "I have always thought of the aphids on this plant as late season species."

They were on my *Sambucus nigra* bush until early winter. They were back on this plant in early June this season. Then they disappeared and have not been seen since. I remember getting them on *S. canadensis* after snow storms in December and seeing them freeze up solid on the plant."

Aphis spiraecola Patch

Spiraea Aphid

TUG HILL, LEWIS Co 10 Aug 1965 a number of alatae, apterae, on *Alnus rugosa* (LLP coll).

***Calaphis annulata** (Koch)

In the NYL, *Chaitophorus betulae* Buckton on *Betula alba* is based on a record by Gillette at ALBANY and GENEVA. In a letter from Dr. Hille Ris Lambers of 11 Ju 1963, he says that this is not a *Chaitophorus* and that the record almost certainly relates to *Calaphis annulata* (Koch), a common aphid on *Betula alba*.

Calaphis betulaecolens (Fitch)

OSSWEGO Co 3, 10 Jl, 28 Aug 1964, alatae, in MT (Gonz coll—JOP det). LUDLOWVILLE 4 Jl 1963, on *Betula lutea* (LLP coll—Ole Heie det). STAMFORD 7 Oct 1963, on *B. papyrifera* (LWA coll—Ole Heie det). ITHACA 12 Ju-16 Aug 1963, 3 alatae, in sticky trap in bean field (Zett coll—JOP det with query).

Calaphis betulella Walsh

ROCHESTER 21 Jl 1962, 1 "drift" alata, on *Rhododendron nudiflorum*, 1 "drift" alata, on *Cypripedium reginae*, and another on *C. acaule*; 24 Aug

1965, 1 dead alata, on *C. parviflorum* and a "drift" alata, on *C. acaule*; 21 Jl 1962, 6 Oct 1963 and 31 Jl 1965 several alatae, apterae, on *Betula nigra*; 29 Jl, 31 Jl and 29 Aug 1965, 1 "drift" alata each, on *Heuchera americana*, cult filbert, and *Primula japonica*—HLG coll.

Capitophorus sp.

LI: FARMINGDALE 18–25 Jl, 28 Jl–1 Aug 1960, 1 alata each, in MT (GVJ coll—LMR det).

Capitophorus braggi Gillette

see *Capitophorus elaeagni* Del Guercis

Capitophorus elaeagni (Del Guercio)

Oleaster Thistle Aphid

OSWEGO Co 28 Aug 1964, alatae, in MT (Gonz coll—JOP det). ROCHESTER 26 Sept 1965, a "drift", on *Lobelia syphilitica* (HLG coll). NORTH LANSING 15 Ju–7 Aug 1963, 4 alatae, and ITHACA 12 Ju–18 Aug 1965, 2 alatae, in sticky traps in bean fields (Zett coll—JOP det). LUDLOWVILLE 21 Sept 1965, 20 alatae at a 50 v. black light (LLP coll).

LI: FARMINGDALE 22–31 May, 1 alata and 14–20 Sept 1961, 1 alata; 12–16 Aug 1963, 2 alatae, in MT (GVJ coll—LMR det). ORIENT 24 Oct 1963, on *Cynara cardunculus* (LMR det); 21 Aug 1963 several stray alatae, on *Lysimachia clethroides*; 9 Aug, 28 Sept, 29 Oct 1965, on *Cirsium discolor*; 23 Oct 1965, 8 alatae, in MT; in Nov 1966 many males and alate vivips, on one *Elaeagnus angustifolia* tree until the last of the leaves had fallen; 16 alatae Oct 1966 in MT—all RL coll.

Capitophorus hippophaes (Walker)

Polygonum Alphid

OSWEGO Co 28 Aug 1964 alata, in MT (Gonz coll—JOP det). NORTH LANSING 15 Ju 17 Aug 1961, 14 alatae and 28 Ju–16 Aug 1965, 143 alatae; ITHACA 28 Ju–16 Aug, 1965, 231 alatae and CANASTOTA, 119 alatae—in sticky traps in bean fields (Zett coll—JOP det).

SI: CASTLETON CORNERS 1–7 Nov 1960, 2 males, 1 alata vivip, in MT (EAR coll—JOP det).

LI: ORIENT 5 Nov 1961, GREENPORT 27 Sept 1957 (omitted from NYL) and 1 Jl 1962, on *Polygonum persicaria* and 3 Ju 1962, on *P. setaceum* (RL coll). SOUTHOLD 7 Sept 1962, on *P. lapathifolium* (RL coll).

Capitophorus hippophaes subsp. **javanicus** Hille Ris Lambers

LI: ORIENT 5 Jl 1959 common, on *Polygonum persicaria* (RL coll—HRL det), omitted from NYL.

Capitophorus ribis (Linnaeus)

see *Cryptomyzus ribis* (Linneaus)

***Carolinaia caricis** Ainslee

NORTH LANSING 15 Ju-7 Aug 1964, 1 alata, in sticky trap in bean field (Zett coll—JOP det).

***Catamergus fulvae** (Oestlund)

LUDLOWVILLE 18 Aug 1964, on *Impatiens pallida* (LLP coll—MacG det). Dr. Pechuman comments however, "Two collections; both on stems and flower stems, not on leaves; one greenish with thin white bloom; the other reddish with no bloom; both collected from a single plant."

Cavariella sp.

LI: GREENPORT 10 Jl 1963 many alatae, apterae, on *Sium suave* (RL coll). ORIENT 22 Jl 1963, a number of immatures, on *Pastinaca sativa*.

Cavariella sp.

LI: RIVERHEAD 15 Jl 1963, apterae, on *Lysimachia quadrifolia* (RL coll—MacG det). ORIENT 19 Jl 1966, on *Heracleum lanatum* (RL coll). BAY VIEW 10 Jl 1960, apterae only, on *Salix alba* (RL coll). Concerning this collection Mr. Latham writes: "The whole top of the small trees was covered with patches of green aphids but I could not find an alate among them; I never saw aphids so abundant." GREENPORT 29 Jl 1962, on *Salix nigra* (RL coll—LMR det sp as prob. *aegopodii*).

Cavariella aegopodii (Scopoli)

ITHACA 6 Oct 1937, 1 alata "drift", on *Morus alba* (Griswold coll—LMR det). LUDLOWVILLE 22 Oct 1963, on leaves of *Salix* sp. (LLP coll). MONTICELLO 4 Sept 1961, on *Cryptotaenia canadensis* (Olsen coll).

LI: FARMINGDALE 15-22 May 1961, in MT (GVJ coll—LMR det). GREENPORT 9 Jl 1961, on *Cicuta maculata* (JOP det with query); 7 Ju 1963, on *Geranium maculatum* (MacG det). ORIENT 31 May 1962, 1 Jl 1966, on *Osmorrhiza claytoni*; 2 Jl 1966, on *Daucus carota*; 11 Aug 1964 (LMR det) and 23 Oct 1965, apterae, on *Foeniculum vulgare*; 26 Oct 1965, apterae on *Sium suave*—all LI except FARMINGDALE RL coll.

Cavariella essigi Gillette & Palmer

OSWEGO Co 3 Jl 1964, an alata, in MT (Gonz coll—JOP det).

LI: GREENPORT 14 Jl 1963, many apterae, on *Cicuta maculata* "on top branches, many dead." ORIENT 24 Sept 1964 a number of alatae, apterae, on *Daucus carota*; 10 Ju 1965, 1 alata, many apterae, on *Heracleum lanatum*—all RL coll.

Cavariella hendersoni Knowlton & Smith

LI: ORIENT 17 Jl 1962, on *Pastinaca sativa* (RL coll—LMR det); 8 Jl 1966, on *Cicuta maculata* (RL coll). SOUTHOLD, 29 Jl 1962, on

C. maculata (RL coll—LMR det). GREENPORT 10 Jl 1963, on *Sium suave* (RL coll—LMR det). SOUTHOLD 29 Jl 1962, on *Cicuta maculata* (RL coll—LMR det).

The above determinations may be in error. Dr. H. L. J. Stroyan writes me on 26 Jan 1968 that he is currently investigating the status of some *Cavariella* species and that the true *C. hendersoni* is only certainly known from Utah. He also points out that the type host plant is *Salix* and the aphid may be a western variant of the eastern and central *C. salicis*.

In NYL, p. 333 are the following records under *C. hendersoni* K & S: LYNDONVILLE 5 Jl 1959 on *Cicuta maculata* (LLP coll—CFS det). LI: GREENPORT 26 Jl 1959 on *C. maculata* (Latham coll—CFS det). It is believed that these may be referable to *C. konoi*.

**Cavariella konoi* Takehashi

LI: GREENPORT, 14 Jl 1963 on *Cicuta bulbifera* (RL coll—Stroyan/Eastop det).

**Cavariella salicis* Monell

Sheridan, no date but probably 1905, on *Salix sp.* (Hayhurst coll—1 slide in USNM).

LI: BAY VIEW, 10 Jl 1960, on *Salix alba* (RL coll—Stroyan/Eastop det).

Cavariella theobaldi (Gillette and Bragg)

LOCKPORT 3 Aug 1966, on *Pastinaca sativa* (LLP coll—LMR det). OSWEGO Co 3 Jl 1964 alata, in MT (Gonz coll—JOP det). NORTH LANSING 15 Ju-7 Aug 1964, 22 alatae, in sticky traps in bean fields; 9 Ju-16 Aug 1965, 26 alatae. ITHACA 12 Ju-16 Aug 1965, (det JOP as mostly *theobaldi*) and CANASTOTA 1 Jl-19 Aug, 8 alatae—all in sticky traps in bean fields 1965 (Zett coll—JOP det).

LI: GREENPORT 20 Ju 1963, alatae, apterae, clustered on stems of *Osmorrhiza claytoni* and ORIENT 2 Jl 1962, common on umbel stalks of *Heracleum lanatum*, and 23 Ju 1963, on *H. lanatum* (RI. coll—MacG det); ORIENT, 17 Jl 1962, on *Pastinaca sativa* (RL coll—LMR det) and 13 Ju 1963, on *Alliaria alliaria* (RL coll—MacG det).

**Cepegillettea myricae* (Patch)

This aphid is in the Food Plant List of the NYL under *Myrica gale* but the following data were omitted from the text of the List.

LI: CALVERTON 18 Oct 1947, on *Myrica cerifera*, 1 slide with 1 mature, 1 immature aptera (RL coll—MDL det with query). RIVERHEAD 17 Aug

1952, on *Comptonia peregrina* var. *asplenifolia* (RL coll—4 slides in USNM—Granovsky det); 15 Jl 1963, 1 aptera, on *M. gale* (RL coll).

ZURICH BOG, WAYNE Co, 25 Ju 1964, 4 apterae, on *Myrica gale* (LLP coll).

?Chaetosiphon (Pentatrichopus) fragaefolii (Cockerell)

Strawberry Aphid

ROCHESTER 16 Jl 1963, on *Rosa carolina* (IILG coll—Eastop det with query).

Chaetosiphon (Pentatrichopus) minor (Forbes)

ROCHESTER 26 Oct 1963 oviparae, on *Fragaria virginiana* (HLG coll—Eastop det).

Chaitophorus sp.

LI: GREENPORT 24 Oct 1963, on *Salix nigra* (RL coll—MacG det).

Chaitophorus betulae Buckton

see *Calaphis annulata* (Koch)

Chaitophorus nigrae Oestlund

Oswego Co 3, 10 Jl, 21 Aug 1964, alatae, in MT (Gonz coll—JOP det). ITHACA 22 Aug 1965, on *Salix* sp. (Zett coll—JOP det).

Chaitophorus populincola (Thomas)

Cloudy-winged Cottonwood Leaf Aphid

Oswego Co 3-10 Jl 1963, 1 alata, in MT (Gonz coll—JOP det). ITHACA (FOREST HOME) 22 May 1938, on *Populus tremuloides* (John Graham coll). RINGWOOD RESERVATION 13 Ju 1963, many on *Populus balsamifera* (given as *P. tacamacca* by LWA coll). CINNAMON LAKE, SCHUYLER Co, 3 Ju 1965, on *P. tremuloides* and LUDLOWVILLE 6 Sept 1965, on *P. deltoides* (LLP coll).

LI: ORIENT 20 Ju, 28 Aug, 9 Sept 1962, on *P. grandidentata* (RL coll). RIVERHEAD 16 Ju 1961, on *P. grandidentata*, SOUTHOLD 14 Jl 1963, on *P. tremuloides*. GREENPORT 11 Ju 1962, on *P. grandidentata*; 23 Ju 1963 (MacG det) 23 May 1964, on *P. tremuloides*—all LI are RL coll.

Chaitophorus populincola subspecies *patchae* Hille Ris Lambers

Oswego Co 10 Jl 1964 alatae, in MT (Gonz coll—JOP det). ITHACA 11 Ju 1965, on *Populus deltoides* (Zett coll—JOP det).

Chaitophorus populifoliae (Oestlund/Davis)

Clear-winged Aspen Aphid

ITHACA (FOREST HOME) 17 ju 1958, on *Populus tremuloides* (John Graham coll).

Chaitophorus stevensis Sanborn

NORTH LANSING 9 Ju-16 Aug 1965, 49 alatae, in sticky traps in bean fields (Zett coll—JOP det).

LI: ?GREENPORT apterae, altatae, on *Populus heterophylla* (RL coll—MacG det with query).

Chaitophorus viminalis Monell

Little Black and Green Willow Leaf Aphid

ROCHESTER 18 Aug 1963 numerous, on leaves of *Salix babylonica* (HLG coll). ZURICH BOG, WAYNE Co, 25 Ju 1964, on *Salix* sp. (LLP coll). LUDLOWVILLE 11 Sept 1963, on *Salix* sp. (LLP coll).

LI: RIVERHEAD 15 Ju 1963, on *Salix alba* (RL coll). This aphid is in the Food Plant List of the NYL under *Salix alba* but not in the List of Aphids for this plant.

*?**Chaitophorus viminicola** Hille Ris Lambers

LI: GREENPORT 11 Sept 1963, on underside of leaves of *Salix nigra* (RL coll—MacG det with query).

Chromaphis juglandicola (Kaltenbach) Walnut Aphid

ROCHESTER 18 Aug 1963, on Carpathian walnut, several specimens (HLG coll—Bissell det).

?**Cinara** sp.

LI: ORIENT 13 Jl 1966, 3 immatures, on *Chamaecyparis thyoides* (RL coll—ANT det with query).

?**Cinara** sp.

ORIENT 2 Jl 1966 several immatures, on *Taxus baccata* (RL coll—ANT det with query).

Cinara cupressi Buckton

In returning slides to me in July 1967, sent them for identification, both Tissot and Pepper expressed the opinion that *C. sabinae* G and P is a synonym of *C. cupressi* (Buckton). If so the records under *sabinae* in the NYL belong here as well as the following: ITHACA 1963, 2 immatures, on red cedar (Warren T. Johnson coll—ANT det with a query as *sabinae*).

***Cinara fornacula** Hottes

POUGHKEEPSIE 13 Jl, Aug 1965, immatures, on *Picea abies* (GOS coll—ANT det with query); 27 Ju 1966, alatae, apterae, immatures from the same tree as the 1965 coll (GOS coll—ANT det).

Cinara laricis (Hartig) Larch Aphid
JOURDANVILLE 6 Jl 1963, on larch (NYSM coll).

Cinara piceicola (Cholodkovsky)
LI: ORIENT 6 Jl 1963, 3 apterae, 1 alata, on *Picea glauca* (RL coll—ANT det).

Cinara pilicornis (Hartig)
LYNDONVILLE 31 Jl 1966, on *Picea abies* (B. C. Dickinson coll; thru W. T. Johnson—JOP det as *pilicornis* with a query).
LI: ORIENT 6 Jl 1962 on *P. glauca*, 2 apterae and 17 Jl 1962, 2 alatae, on *P. pungens* (RL coll—ANT det 1964).

Cinara pinea (Mordwilko)
CINCINNATUS (3 mi E), CHENANGO Co, 17 Jl 1965, apterae, on *Pinus sylvestris* (LLP coll—JOP det). NORTH LANSING 9 Ju–18 Aug 1965, 1 alata, in sticky trap in bean field (Zett—JOP det).

In the NYL *C. pini* (L.) is recorded from LI: LOCUST VALLEY May 1936 on the needles of Austrian pine (Ken E. Maxwell coll—ANT det). Dr. Tissot has recently reexamined the slides on which this record is based. On 22 Ju 1967, he notes that this should be called *C. pinea* (Mordwilko) since when he made the determination (about 1937) *C. pinea* was not known to occur in the U. S. Tissot believes that the food plant was misidentified by Maxwell and that it should be *Pinus sylvestris*.

Cinara pinivora (Wilson)
LI: ORIENT 5 Jl 1966, on *Pinus rigida* (RL coll—ANT det).

Cinara sabinae Gillette & Palmer
see *Cinara cupressi* (Buckton)

Cinara strobi Fitch White Pine Aphid
ITHACA 10 Sept 1927, on *Pinus strobi* (Griswold coll—ANT det); 12 Ju–16 Aug 1965, 2 alatae, from sticky traps in bean field (Zett coll—JOP det). LUDLOWVILLE 4 Jl 1965, on *P. strobi* (LLP coll—JOP det).

"Many eggs observed in the ARNOT FOREST near ITHACA; not hatched as of May 1." [NY Wkly Rpt in CEIR 14 (20):476, May 15, 1964].

"Found on Scotch pine Christmas trees at MARTVILLE, CAYUGA Co" [NY Wkly Rpt, Apr 26 in CEIR 15 (19):451, May 7 1965]. It is doubtful if this aphid is *C. strobi*.

Cinara watsoni Tissot
LI: RIVERHEAD 15 Jl, 1 alata and MEDFORD 20 Oct 1963, 6 immature

parasitized specimens, on *Pinus rigida* (RL coll—ANT det, the MEDFORD coll with query). ORIENT 20 Oct, 6 and 17 Nov 1966, sexuales, on *P. rigida* (RL coll—JOP det).

Colapha ulmicola (Fitch) Elm Cockscomb-gall Aphid

Oswego Co 10 Jl 1964, 1 alata, in MT (Gonz coll—JOP det). "Fully formed (galls) on slippery elm in Vestal area." [NY Wkly Rpt Ju 14 in CEIR 15, (26):692, 25 Ju 1965].

Colapha ulmisacculi (Patch) Elm Sack-gall Aphid

Oswego Co 3 Jl 1964, 2 alatae, in MT (Gonz coll—JOP det). ITHACA 12 Ju—16 Aug 1965, 1 alata, in sticky trap in bean field (Zett—JOP det).

***Coloradoa absinthii** (Lichenstein)

In a letter to me dated 11 Ju 1963, Dr. Hille Ris Lambers suggests that Olsen's record in the NYL of *Rhopalosiphum angelicae* DeG. on *Artemisia absinthium* must have applied to *Coloradoa absinthii*, an aphid restricted to *A. absinthium* and that *angelicae* is restricted to *Angelica* and *Salix*. I have been unable to locate a slide representing Olsen's collection.

***Coloradoa rufomaculatum** (Wilson) Pale Chrysanthemum Aphid

Formerly in *Rhopalosiphum*

ITHACA 12 Oct 1932, on chrysanthemums (indoors), (MDL coll—ANT det).

Cryptomyzus ribis (Linnaeus) Currant Aphid

Formerly in *Capitophorus*

ROCHESTER 1 Jl 1962, 10 May 1963 (apterae); 24 Ju, 26 Oct 1963 (alatae), on red currant; 18 Aug 1963 on *Leonurus cardiaca*, motherwort, (MDL det with query), (HLG coll); on 26 Sept 1965 Gibson writes: "Found that the usual red-currant aphids have killed my bushes this year. I did not spray until after fruit ripened and that was too late."

Dactynotus spp.

All determinations in this genus made by Dr. A. Tom Olive unless otherwise specified. The following collections could not be determined to species:

ROCHESTER 1, 16 Jl, on *Oenothera fruticosa*, *Aster ericoides*, *Epilobium angustifolium*, and 14 Sept, 1963, on *Anaphalis margaritacea* (IILG coll). ITHACA (presumably) 22 Jl 1926, on *Helenium* sp. outdoors (Griswold coll—5 slides in CU coll, 4 alatae, 1 aptera); this record was in the NYL p. 346 as *D. tardae* H and F but it now appears that *tardae* has not been collected in NY; 11 Aug 1939, on *Eupatorium* sp. (Griswold coll—2 slides in CU Coll); 30 Ju 1963, on *Chrysanthemum leucanthemum* (LLP coll—

MacG det). WEST NYACK J1 1960, several apterae, on *Eupatorium coelestinum* formi *alba* (det E. C. Leonard), (CEO coll—MDL det). APALACHIN 5 Aug 1965, on *Anthemis cotula* (LLP coll—MacG det). RENSSELAERVILLE 25 Aug 1966, on *Solidago* sp. (LLP coll—ATO det).

SI: CLOVE LAKES 31 Aug 1962, on *Solidago graminifolia* (EAR coll). CONCORD 31 J1 1963, on *Rudbeckia hirta* (EAR coll).

LI: BAY VIEW 25 Ju 1962, on *Hieracium venosum* (RL coll—ATO det, who notes "could be a new species—don't know as yet"); 9 Ju, on *H. pratense*; 10 Ju, on *H. florentinum*; 10, 25 Ju, on *Hypochaeris radicata*; 21 Oct, on *Chrysanthemum leucanthemum* and *Gnaphalium polycephalum*; 8 Oct, on *Solidago rugosa*—all 1962. RIVERHEAD 15 J1 1963 on *Gnaphalium obtusifolium* and 12 J1 1963, on *Eupatorium maculatum*. GREENPORT 1862, 7 J1, on *Sonchus oleraceus* and *Solidago juncea*, and ? J1, on *Eupatorium berbaefolium* and *E. rotundifolium*; 1963, 23 Ju, on *Hieracium pratense*; 14 J1, on *Eupatorium pilosum*; 3 Aug, on *E. purpureum*; 23 Ju, on *Hieracium pratense*; 26 Sept, on *Erechtites hieracifolia*; and 23 Aug, on *Cassia nictitans*. Orient 13 1962, on *Taraxacum erythrospermum*; 1963, 2 Ju, on *Rheum rhabonticum*; 13 J1, 4 Sept, and 16 Oct, on *Eupatorium purpureum*; 19 J1, on *Tithonia rotundifolia*; 17 Oct, on *Solidago caesia*; 20 Oct, on *Aster tanacetifolia*; 1964, 18 Aug, 8 Sept, on *Eupatorium perfoliatum*; 18 Aug, on *Calendula officinalis*; and 4 Aug 1965, on *Gazania rigens*—All LI colls, by RI..

Dactynotus (Dactynotus) ambrosiae (Thomas)

Brown Ambrosia Aphid

TAHAWUS, in the ADIRONDACKS, 4 Aug 1962, 9 alatae, several apterae, on *Rudbeckia hirta* (HLG coll). ROCHESTER 22 J1 1962, alatae, apterae, on *R. hirta* (HLG coll). LUDLOWVILLE 20 Aug 1964, on *Ambrosia artemisiifolia* (LLP coll). ITHACA 20 J1, 25 Aug 1962, on *Solidago* sp. (Nault coll); 3 Aug 1963, on *Ambrosia artemisiifolia* (LWA coll). OSWEGO Co Ju–Sept 1964, alatae, in MT (Gonz coll—JOP det). WEST NYACK 23 Aug 1947, 12 J1 1959, on *A. trifida* (CEO coll).

SI: CASTLETON CORNERS 25 Aug 1961, on *A. trifida* (EAR coll); 29 Aug 1963, on *A. artemisiifolia* and 15 Sept, 6 Oct 1963, alatae, in MT (EAR coll—ATO det).

LI: ORIENT 26 Ju 1962, on *Solidago rugosa* and 30 Oct 1963 on *Ambrosia artemisiifolia* (RL coll). GREENPORT 10, 19 Ju 1962, on *Iva frutescens*; 1 J1 1962, on *Solidago speciosa* (RL coll); 6 Oct 1964, on *Prenanthes trifoliata* (RL coll).

Dactynotus ambrosiae complex

CROWN POINT 13 Aug 1962, on *Taraxacum officinale*; only one plant (senescent) out of many plants examined was infested, a few aphids in

extreme basal leaves (LMR coll). ROCHESTER 9 Oct 1965, alatae, on wild *Daucus carota*; alatae, apterae, on *Anaphalis margaritacea* (HLG coll). ITHACA, SIX-MILE CREEK, 13 Jl 1963, on *Eupatorium perfoliatum* (LLP); 23 Sept 1966, apterae, on *Solidago* sp. (Hayes coll). WEST NYACK 10 Oct 1963, on *E. coelestinum* (Olsen coll). LUDLOWVILLE 10 Sept 1963, on *E. maculatum* (LLP coll).

LI: FARMINGDALE 4-12 Jl, 2 alatae, 31 Aug-7 Sept 1961, 1 alata, in MT (GVJ coll—LMR det). SOUTHHOLD 8 Jl 1960, on *Vernonia noveboracensis* and *Iva oraria*. GREENPORT 1961, on *Boehmeria cylindrica* (RL coll); 6 Aug 1965, on *Eupatorium purpureum*. ORIENT 11 Sept 1965, on *Senecio vulgaris*; 26 Jl 1965, on *Calendula officinalis*; 20 Sept 1965, on *Arctotis breviscapa*; 21 Ju 1966, on *Rudbeckia* sp.; 2 Jl 1961, on *Solidago sempervirens*; 19 Jl 1966, on *Iva oraria* (RL coll). **Dactynotus (Lambersius) anomala*e Hottes and Frison

ALTAMONT 13 Sept 1939, on *Aster novi-angliae* (Griswold coll—4 apterae, 2 alatae, on 3 slides in CU Coll). ROCHESTER 30 Ju, 20 Jl (apterae), 31 Aug 1963 (alatae), and 31 Jl 1965 (apterae, alatae), on *A. novi-angliae* (HLG coll). LOCKPORT 26 Sept, 8 Oct 1959 and MEDINA 30 Oct 1959, on *A. novi-angliae* (LLP coll—ATO det).

SI: CASTLETON CORNERS, 15 Sept 1963, alata, in MT (EAR coll—ATO det).

**Dactynotus astronomus* Hille Ris Lambers

DANBY 5 Aug 1965, 2 alatae, 9 apterae, on *Aster* sp. (LLP coll). Described from CANADA in 1962. Dr. Olive writes he collected a few specimens on Mt. DESERT ISLAND in MAINE in 1965.

**Dactynotus (Lambersius) caligatus* Richards

HECTOR LAND USE AREA, SCHUYLER Co, 23 Aug and GILBOA 25 Aug 1966, on *Solidago* sp. (LLP coll—ATO det).

LI: GREENPORT 6 Jl 1966, on *Solidago odora* (RL coll—ATO det who comments "this is very close to *tissoti*; I still wonder whether or not it is a valid species").

Dactynotus (Dactynotus) chrysanthemi (Oestlund)

LUDLOWVILLE 10 Sept 1963, 19 Sept 1964, on *Bidens cernua* (LLP coll). SLATERVILLE 14 Sept 1963, on *B. cernua* (LWA coll).

LI: ORIENT 10 Aug 1962, 25 Sept 1963, Sept 1964, on *B. vulgata*; 23 Oct, on *B. frondosa* and 14 Oct 1963, on *B. tripartita*. GREENPORT 22 Oct 1962, on *B. comosa*. All LI colls by RL.

SI: ROSSVILLE 26 Sept 1963, on *B. vulgata* (EAR coll—ATO det).

***Dactynotus (Lambersius) crepusisiphon** Olive
 LI: ORIENT 9 Jl 1966, on *Aster simplex* (RL coll).

In making the determination Dr. Olive writes that this record was "quite a shocker" to him since this aphid has only been previously collected at several nearby localities at high elevations in western NORTH CAROLINA. He further states that this species is quite distinct in the subgenus *Lambersius* and cannot be mistaken for anything else.

Dactynotus (Lambersius) erigeronensis (Thomas)

Canadian Fleabane Aphid

ROCHESTER 16, 17 Sept 1963, 5 Sept 1965, on *Erigeron canadensis* (HLG coll). ITHACA (CORNELL CAMPUS) 29 Sept 1963, on *E. canadensis* (LLP coll).

LI: MATTITUCK and PECONIC 28 Jl and ORIENT 29 Jl 1961, common on stems of *Leptilon canadensis*. GREENPORT 23, 27 Aug 1964, on *E. canadensis*. SOUTHOLD 19 Jl 1962, on *E. canadensis*. ORIENT 22 Sept 1963, on *Solidago sempervirens*; 19, 22 Sept, 14 Oct 1963, 19, 27 Aug 1964 and 9 Aug 1965 on *E. canadensis*; 28 Aug 1964, 19 Aug 1965 and 9 Aug 1966, on *E. annuus*. All LI colls by RL.

Dactynotus erigeronensis subsp. *baccharidis* (Clarke)

Formerly *Macrosiphum baccharidis* Clarke

The foregoing synonymy was established by Hille Ris Lambers in Hildgardia 37(15):583, 1966.

LI: GREENPORT 11 Aug 1965, 3 immature apterae, on *Baccharis halmifolia* (RL coll—MDL det as presumably this species). ORIENT 15 Jl 1966, on *B. halmifolia* (RL coll).

***Dactynotus (Uromelan) eupatorifoliae** Tissot

LUDLOWVILLE 24 Aug 1963, on *Eupatorium urticaefolium* (LLP coll).

Dactynotus (Lambersius) gravicornis (Patch)

ROCHESTER 17 Aug, 19 Sept 1963, 5 Sept 1965, on *Erigeron canadensis* (HLG coll); 20 Jl and 4 Aug 1963, on *Solidago juncea* (HLG coll); 21 Jl 1963, on *Erigeron annuus* (HLG coll). DANBY 5 Aug 1965, on *E. annuus* (LLP coll). STAMFORD 10 Aug 1963, on *E. strigosus* (LWA coll).

LI: ORIENT 15 Jl 1961, on *E. annuus*; 25 Ju 1964, on *E. canadensis*; 28 Aug 1964, Jl 4 1966, on *E. annuus*; 30 Aug 1966, on *E. ramosus*; 1-15 Ju 1962, in MT. GREENPORT 12 Jl 1963, on *E. pulchellus*; 4 Aug 1964, on *E. annuus*; 26 Aug 1964, on *Solidago odora*. All LI colls by RL.

Dactynotus (Uromelan) helianthicola Olive

In NYL as *Dactynotus* n. sp. No 3 Olive.

SI: CASTLETON CORNERS summer 1964, in MT (EAR coll).

LI: ORIENT 28 Ju 1962, on *Helianthus tuberosus*, 10 Oct 1963, on *H. strumosus* (RL coll). GREENPORT 30 Aug, on *H. strumosus*, 6 Aug 1964 and 17 Sept 1965, on *H. tuberosus* (RL coll).

Dactynotus (Dactynotus) impatiensicolens (Patch)

ITHACA 13 Jl 1963 (LLP coll), 13 Jl 1964 (LWA coll), on *Impatiens biflora* (MacG det). LUDLOWVILLE 10 Sept 1963, 18 Aug 1964, on *I. biflora*; 31 Aug 1963, 18 Aug 1964, on *I. pallida* (LLP coll—MacG det).

SI: CLOVE LAKES PARK 16 Jl 1962, on *I. biflora* (EAR coll).

LI: GREENPORT 11 Jl 1962, SOUTHPOLD 23 Jl 1963, on *I. biflora* (RL coll).

***?Dactynotus (Dactynotus) lanceolatus** (Patch)

LI: SOUTHPOLD 10 Jl 1963, on *Solidago juncea*, GREENPORT 21 Ju 1963, *S. rugosa* and 26 Aug 1964, on *S. juncea* (all RL coll—ATO det). Dr. Olive writes me he is not sure what *lanceolatus* looks like; the types could not be located when he looked for them in the Patch collection in the University of Maine in the summer of 1965. However, MacGillivray [Ann. Ent. Soc. Am. 61 (2):359, 1968] designated a neotype and thus validated the species.

***Dactynotus (Dactynotus) leonardi** Olive

ROCHESTER 30 Sept, 14 Oct 1962, 30 Ju, 3, 4 Aug, 17 Sept 1963, 31 Jl 1965, on *Rudbeckia hirta* (HLG coll); 31 Jl 1965, on *Echinacea purpurea* (HGL coll). ITHACA 18 Oct 1965, on *Rudbeckia* hybrid (LLP coll). SOUTH LANSING 31 Aug 1963 (JWA coll). WEST NYACK Jl 1961 (Olsen coll). LA GRANGE 15 Aug 1965 (GOS coll).

LI: ORIENT and GREENPORT 23 Aug 1964 and ORIENT 11 Sept 1963 (RL coll).

All of the preceding collections were made on *Rudbeckia hirta*, except one.

ITHACA (COMSTOCK GARDEN) 2 Aug 1926 (6 slides, apterae and alatae), 22, 26 Jl 1939 (8 slides, apterae and alatae) on *Helianthoides* (Griswold coll—slides in CU Coll). These collections were referred to in the NYL p. 341 as *Dactynotus* n. sp. with the following notation: "Dr. Olive says this definitely is a new species but he hesitates to describe it without color notes." In Feb 1966 Dr. Olive determined these slides as *Dactynotus leonardi*.

***Dactynotus (Dactynotus) nigrotibius** Olive

LI: ORIENT 13, 22 Sept 1963, on *Solidago sempervirens* and 31 Sept 1963, on *S. ulmifolia* (RL coll). GREENPORT 26 Aug 1964, on *S. odora* (RL coll).

Dactynotus (Dactynotus) nigrotuberculatus Olive

In NYL as *Dactynotus* n. sp. No 5 Olive. BARNEVELD 30 Aug 1958, on goldenglow (Geo. N. Wolcott coll). PANTHER LAKE, OSWEGO Co, 21 Aug 1963, on *Solidago* sp. (LLP coll). ROCHESTER 16, 27 Jl, 4, 19 Aug 1963, 21 Aug, 26 Sept 1965, on *Solidago juncea* (HLG coll). BESSEMER 7 Sept 1963, on *S. canadensis* (LWA coll). STAMFORD 7 Jl 1963, on *Solidago* sp. (LWA coll). NORTH LANSING 21 Aug 1965, on *S. canadensis* (LLP coll). APPALACHIN 4 Aug 1965, on *Solidago* sp. (LLP coll). WEST NYACK 16 Aug 1961, 5 alatae, 3 apterae, 8 Aug 1947, 6 Jl 1958, and 10 Jl 1959, on *Solidago* sp. (CEO coll). LUDLOWVILLE 13 Aug, GILBOA 25 Aug and NORTH LANSING 27 Aug 1966, on *Solidago* sp.; and 25 Aug 1966, on *S. altissima* (LIP coll—ATO det).

SI: CLOVE LAKES PARK 19 Aug 1962, on *Cirsium arvense* (ATO det with query) and GRASSMERE 1 Oct 1963, on *Solidago rugosa* (EAR coll—ANT det). CASTLETON CORNERS 1 Ju 1963, on *Solidago* sp. (EAR coll—ATO det). CASTLETON CORNERS 6 Nov 1960, on *S. sempervirens* (EAR coll).

Aug, 10 Sept 1963, 25 Aug, 8 Sept 1964, on *A. novi-belgii*; 10 Jl, on *A. lateriflorus* and 13 Jl 1963, on *A. puniceus*; Sept 17, on *A. ericooides* and 6 Aug 1965, on *A. novi-belgii*. SOUTHOLD 25 Aug 1963, on *A. novi-belgii*; 8 Jl 1960, on *A. umbellatus*. All LI colls by RL.

***Dactynotus (Dactynotus) pepperi** Olive

ROCHESTER 30 Sept 1962, on *Centaurea dealbata* (HLG coll), 1 slide of 1 alata, 2 apterae.

SI: CASTLETON CORNERS 11 Oct 1962, on *Cirsium arvense* (EAR coll).

Dactynotus (Dactynotus) pseudambrosiae Olive

In NYL as *Dactynotus* n. sp. No. 7 Olive.

ITHACA 1 Aug 1965, on *Lactuca* sp. (Zett coll—JOP det as *pseudambrosiae* complex).

SI: CASTLETON CORNERS 10 Oct 1963, on *Lactuca canadensis* (EAR coll); 15 Sept, 6 Oct 1963, alatae, in MT (EAR coll—ATO det).

LI: BAY VIEW 10 Ju, on *Cicerium intybus*, 25 Ju, on *Hieracium floribundum*, 8 Oct, on *Lactuca canadensis* 1962. GREENPORT 25 Sept 1962, on *L. saggitifolia*; 26 Aug 1964, on *L. canadensis*; 11 Aug, 12 Sept 1965, on *L. canadensis*; 17 Aug 1965, on *L. spicata*. ORIENT 4 Oct, 9 Sept 1962; 28 Sept 1963 and 11 Sept 1965, on *L. sativa*; 18 Jl 1962, on *L. serriola*. All LI colls by RL.

Dactynotus (Dactynotus) rudbeckiae (Fitch)

Goldenglow or Coneflower Aphid

SI: CASTLETON CORNERS 29 Aug 1963, on *Rudbeckia laciniata* (EAR coll—ATO det).

LI: ORIENT 9 Sept 1962, on *Tithonia rotundifolia* (RL coll—ATO det with query). FARMINGDALE 12–16 Aug 1963, 1 alata, in MT (GVJ coll—LMR det).

Dactynotus russellae Hille Ris Lambers

GOODNOW FLOWAGE in the ADIRONDACKS 4 Aug 1962, on *Antennaria* sp. (HLG coll).

ITHACA 19 Ju 1927, on *Anaphalis margaritacea*, 13 apterae on 4 slides in CU Coll (Griswold coll); this species was not described until 1960. ROCHESTER 9 Oct 1965, on *A. margaritacea* (HLG coll). STAMFORD 10 Aug 1963, on *A. margaritacea* (LWA coll). GUN HOUSE HILL, HOBART, 10 Aug 1963, on *A. neodioica* (LWA coll).

LI: In the NYL *D. rudbeckiae* in recorded from WADING RIVER 1913 or 1914, on *A. neodioica* (Olsen coll). This probably refers to *D. russellae*.

Dactynotus (Dactynotus) sonchellus (Monell)

LI: ORIENT 28 Ju 1964, on *Sonchus asper* (RL coll.).

***Dactynotus (Dactynotus) sonchi (Linnaeus)**

ROCHESTER 20 Jl 1962, 20 Jl, 4. 27 Aug 1963, on *Sonchus asper* (HLG coll). ITHACA 3 Aug 1963, on *Lactuca canadensis* (LWA coll); 17 Aug 1966, on *Sonchus arvensis* (LLP coll).

LI: ORIENT 22 Aug 1962, 5, 14 Aug 1964; 3, 7 Jl 1965, on *S. arvensis*; 28 Jl 1964, 31 Jl 1965, on *S. asper*; 9, 25 Aug 1963, on *S. oleraceus*; 11 Oct 1963, on *Aster lateriflorus*; 11 Oct 1963, 3 Sept 1964, on *Erigeron canadensis*; 24 Jl 1964, on *Lactuca serriola*; 23 Jl 1965, on *Sonchus oleraceus*. GREENPORT 8 Jl 1965, on *Sonchus* sp. All LI colls by RL.

Dactynotus (Uromelan) taraxaci (Kaltenbach)

Dark Dandelion Aphid

STAMFORD 7 Jl 1963 a stray alata, on *Asclepias syriaca* (LWA coll—ATO det).

LI: ORIENT 1–15 Jl 1962, alata, in MT (RL coll.).

Dactynotus (Uromelan) tardae (Hottes and Frison)

This species is in the NYL from ITHACA 22 Jl 1926 on *Helenium* sp. (Griswold coll—MDL det), 5 slides in CU Coll. Dr. Olive examined 4 of these slides (uncleared, with 1 alata on each) in 1965 and could only determine them as *Dactynotus* sp. It is therefore believed that *D. tardae* is not yet known to occur in NY).

Dactynotus (Lambersius) tissoti (Boudreaux)

ALTAMONT 26 Aug 1937, on *Solidago* sp. (Griswold coll). STAMFORD 10 Aug 1963, on *S. bicolor* (LWA coll). NORTH LANSING 21 Aug 1965, on *S. canadensis* (LLP coll). KIBBIE LAKE, CONSTANTIA 15 Jl 1964, on *Solidago* sp (LLP coll).

GREENPORT 8 Jl 1965, on *S. rugosa*. All LI colls by RL.

Drepanaphis acerifolae (Thomas) Painted Maple Aphid

ELIZABETHTOWN 28 Sept 1936, sexuales, on *Acer saccharum* (Crosby coll—Mason det). OSWEGO Co 3 Jl, 21 Aug 1964, alatae, in MT (Gonz coll—JOP det). LOCKPORT 12 Ju 1959, on *A. saccharinum* (LLP coll—CFS det). LYNDONVILLE 19 Ju 1959, on *A. saccharinum* (LLP coll—CFS det). ITHACA 12 Ju–16 Aug 1965, 8 alatae, in sticky traps (Zett coll—JOP det).

LI: FARMINGDALE 8–14 Sept 1961, 1 alata, and 12–16 Aug 1963, 1 alata, in MT (GVJ coll—LMR det).

Drepanaphis carolinensis Smith

ROCHESTER 13 Sept 1963, a number on *Acer nigrum* (LLP coll). OSWEGO Co 3 Jl 1964, alata, in MT (Gonz coll—JOP det).

Drepanaphis kansensis Smith

LUDLOWVILLE 4 Jl 1963, 18 Jl 1964, on *Acer spicatum* (LLP coll). BELCHER (about 10 mi. NW of SALEM) 6 Jl 1965, 9 alatae, 1 alatoid nymph collected, on *Acer* sp. (Bissell coll).

***Drepanaphis knowltoni** Smith and Dillery

Mt. KISCO 31 Jl, 12 Aug 1960, on *Acer* sp. (John Graham coll—Smith and Dillery det).

Drepanaphis monelli (Davis)

ITHACA 12 Ju–16 Aug 1965, 1 alata, in sticky trap (Zett coll—JOP det).

Drepanaphis parva Smith

OSWEGO Co 3 Jl, 21 Aug 1964, alatae, in MT (Gonz coll—JOP det). HOBART 6 Jl 1963, on *Acer rubrum* (LWA coll—CFS det).

LI: GREENPORT 22 Sept 1957, accidental on *Lycopus americana* (RL coll—CFS det).

Drepanaphis sabrinae Miller

LOCKPORT 24 Sept and MEDINA 22 Sept 1960, on *Acer saccharum* (LLP coll—CFS det).

LI: FARMINGDALE 6–9 Sept 1963, 1 alata, in MT (GVJ coll—LMR det).

***Drepanaphis spicata** Smith

STAMFORD 29 Jl and LUDLOWVILLE 4 Jl 1965, on *Acer spicatum* (LLP coll—CFS det).

***Drepanosiphum platanoides** (Schrank) Sycamore Maple Aphid

This aphid was omitted from the NYL. ITHACA—in an unpublished MS Morrison wrote:

"So far as I know at the present time this species has not been reported from the Eastern U.S. I found winged specimens and nymphs of it on the sycamore maple in front of the south end of ROCKEFELLER HALL (on the CORNELL CAMPUS) from June 1-12 1914 on the underside of the leaves."

The following collections are from *Acer pseudoplatanus* unless otherwise specified;—ITHACA 13 Sept 1935, many sexuales on *Acer platanoides* (Crosby coll). ROCHESTER 12 Sept 1958 very abundant and agile (LLP coll).

LI: RIVERHEAD 1 Sept 1946. EAST QUOGUE 31 Oct 1958, males, oviparae. MATTITUCK 24 Oct 1958, males, oviparae. EAST MARION 24 Oct 1963, males, oviparae. GREENPORT 24 May 1963, 23 Ju 1959. ORIENT 28 Nov—1 Dec 1948, 20 Sept 1957, 18 Ju, 15 Oct 1958, 10 May 1959, 24 May 1962, 8 May 1963, 2 Nov 1963, 28 Oct, 8, 19 Nov 1964, 16 May 1965, many and this latter coll attended by the ant *Lasius alienus* (Foerster); 1 Nov 1966 males and ovips. All LI colls by RL.

Dysaphis plantaginea (Passerini) Rosy Apple Aphid
Formerly called *Anuraphis rosea* (Baker) in the USA.

NORTH LANSING 9 Apr—16 Aug 1963, 13 alatae, and CANASTOTA 1 Jl—19 Aug, 7 alatae 1965, in sticky traps (Zett coll—JOP det). OSWEGO Co 3 Jl 1964, alata, in MT (Gonz coll—JOP det).

Dysaphis tulipae (Fonscolombe) Tulip Bulb Aphid
Formerly in *Anuraphis*

SI: CASTLETON CORNERS 7 Sept 1963, 6 Jl 1964, in cultures of tall bearded iris (EAR coll); 2 Nov 1964, a number of apterae and 2 alatae, on *Iris alberta*, *I. aphylla*, *I. croatica*, *I. pallida*, *I. perrieri*, and *I. variegata* (EAR coll); 1—7 Nov 1960, 2 alatae, in MT (EAR coll—JOP det).

Eriosoma americanum (Riley) Woolly Elm Aphid
OSWEGO Co, weekly number of aphids trapped per MT during 12 weeks in 1963 is 24 alatae and the same for 1964; (Gonz coll—JOP det). NORTH LANSING 15 Ju—7 Aug 1964, 73 alatae, in sticky traps in bean fields (Zett coll—JOP det). LUDLOWVILLE 13 Ju 1966, in rolled edge of leaf of *Ulmus fulva* (LLP coll); this may be *E. mimica* H and F (? sent to CFS in Jan 1967).

Eriosoma crataegi (Oestlund)

LOCKPORT 4 Jl 1960, on *Crataegus oxyacantha* and MIDDLEPORT 19 Sept 1960, on *Crataegus* sp. (LLP coll—CFS det). SPENCER 30 Oct 1966, on *Crataegus* sp. (LLP coll).

SI: BOROUGH HALL 2 Nov 1961 (EAR coll—ANT det), CLOVE LAKES PARK 20 Aug 1961 and CASTLETON CORNERS 1 Sept 1963, many on *C. crusgalli* (EAR coll).

LI: ORIENT 18 Oct 1965, on *C. oxyacantha* (RL coll).

Eriosoma lanigerum (Hausmann) Woolly Apple Aphid

WATKINS 18 Jl 1917, on elm (R. A. Cushman coll—1 slide in USNM). DANVILLE 4 May 1921, on apple (H. Y. Gould coll—1 slide in USNM). NY—"Produced young and build up has begun on elm." [CEIR 14, (23):584, 5 Ju 1964]. TONAWANDA INDIAN RESERVATION, GENESEE Co., 8 Oct 1960 (LLP coll), on *Malus coronaria*; this locality record was omitted in the NYL although the aphid is in the Food Plant List.

SI: CASTLETON CORNERS 2 Nov 1964, on *M. arnoldiana* (EAR coll).

***Eriosoma mimica** Hottes and Frison

LUDLOWVILLE 12 Ju 1965, in tightly curled edge of leaves of *Ulmus rubra* (LLP coll—CFS det). Dr. Pechuman writes: "Over this weekend (Ju 12 was a Saturday) I examined about 25 slippery elms; on only one did I find tightly rolled leaves and the predators, syrphid fly larvae, had cleaned them out. I collected two leaves which may have a few aphids left."

Eucallipterus tiliae (Linnaeus) Linden Aphid
Formerly placed in *Myzocallis*

ITHACA 8 Aug 1965, on *Tilia* sp. (Zett coll—JOP det). LUDLOWVILLE 12 Ju 1965, many trees examined but only a few aphids found on *T. americana* (LLP coll). MARGARET T. MORRIS STATE PARK 8 Aug 1964, on *Tilia* sp. (JOS coll).

SI: CLOVE LAKES PARK 16 Jl 1962, on *T. chordata* and CASTLETON CORNERS 23 Sept 1963, on *T. europea* (EAR coll).

Euceraphis betulae (Koch)

see *Euceraphis punctipennis* Zetterstedt

Euceraphis mucida (Fitch)

OSSWEGO Co 10 Jl 1964, 1 alata, in MT (Gonz coll—JOP det). ITHACA 23 Jl 1963, on *Betula lenta* (LLP coll—Ole Heie det).

Euceraphis punctipennis Zetterstedt European Birch Aphid
Formerly identified in this country as *E. betulae* (Koch).

MIDDLEPORT 28 May 1962, on birch leaves (Donald H. Moore coll—1 slide in USNM with 2 alatae, 1 aptera; LMR det). NY—"A woolly birch aphid produced young and build up has begun." [CEIR 14 (23):584, 8 Ju 1964].

Eulachnus agilis (Kaltenbach) or **E. rileyi** (Williams)

ITHACA 28 May 1865, on *Pinus sylvestris* (Zett coll—JOP det). NORTH LANSING 9 Ju–16 Aug 1965, 1 alata, on sticky trap in bean field (Zett coll—JOP det).

Forda olivacea Rohwer

see *Forda trivialis* Passerini

Forda trivialis Passerini

ITHACA 12 Ju–16 Aug 1965, alata, in sticky trap in bean field (Zett coll—JOP det).

***Geoica pellucida** (Buckton)

Formerly identified in this country as *G. utricularia* (Passerini)

OSWEGO Co 1 alata, in MT 10 Jl 1964 (Gonz coll—JOP det). ITHACA 12 Ju–16 Aug, 13 alatae and NORTH LANSING, 9 Ju–16 Aug 1965, 21 alatae, in sticky traps in bean fields (Zett coll—JOP det).

***Glabromyzus howardii** (Wilson)

Poison Ivy Aphid

This aphid was originally placed in *Amphorophora* but has also been considered to belong in *Rhopalosiphum* and *Sitomyzus*.

The earliest record from NEW YORK, presumably of this aphid, is from ITHACA 21 Jl 1939, on poison ivy (Roy Hansberry coll—?Griswold det as *Rhopalosiphum rhois*).

Dr. Clyde F. Smith determined a collection from LI, BAY VIEW by Latham 12 Jl 1960, on poison ivy as *Rhopalosiphum* n. sp. Dr. Smith wrote me on 20 Apr 1967 that the aphid from poison ivy he had been considering as a new species is probably the same as Richards discusses in his paper in Can. Ent. 92(10):327, 1960 as *Amphorophora howardii* Wilson. He says however "to date I have not been able to find this on an alternate host nor have I had time to make a detailed study of this group. Certainly if they are the same then *howardii* would be placed in *Sitomyzus*." Dr. Hille Ris Lambers (Hilgardia 37, 15:587, 1966) says "Provisionally the name *Glabromyzus howardii* could be applied to this poison ivy aphid." Dr. H. L. G. Stroyan, in listing many aphids collected by him in the U.S. in 1966, records two collections made by Dr. Smith and himself on poison ivy and another by himself on "a tall grass"—all in NORTH CAROLINA and gives these under the name of *Glabromyzus howardii* Wilson.

The only other records of this poison ivy aphid in NY are from LI: GREENPORT 30 Ju, 7 Jl 1962, 23 Ju 1963. SOUTHOLD 25 Ju, 10 Jl 1963. ORIENT 26 Ju, 5 Jl 1962; 23 Sept 1965 (oviparae present); Jl 1966 (all RL coll).

Hamamelistes spinosus Shimer Spiny Bud Gall of Witch Hazel

PANTHER LAKE, OSWEGO Co 17 Ju 1964, abundant on *Betula populifolia* (LLP coll). MALLORYVILLE 23 Ju 1963, in corrugated leaves of *B. lutea*

(LWA coll). ITHACA 23 Ju 1963, in corrugated leaves of *B. lenta* (LLP coll). LUDLOWVILLE 4 JI 1963, on *B. lutea* (LLP coll—Ole Heie det) and 6 Aug 1966, in spiny galls on witch hazel (LLP coll). ALBANY 17 Ju 1951, many spiny bud galls on witch hazel (NY State Mus Coll).

Hormaphis hamamelidis (Fitch)

SI: CLOVE LAKES PARK 22 Aug 1961, on witch hazel (EAR coll).

LI: GREENPORT 6 Aug 1965, a few on witch hazel (RL coll).

Hyadaphis foeniculi (Passerini) Honeysuckle and Parsnip Aphid
Formerly *Rhopalosiphum conii* Davidson

ROCHESTER 7 Oct 1962, 1 alata male and 1 alate vivipara, accidental on *Rubus odoratus* (HLG coll—LMR det); 10 Nov 1963, on ornamental *Lonicera* sp. (HLG coll—Eastop det). LOCKPORT 3 Aug 1966, on *Pastinaca sativa* (LLP coll—LMR det). NORTH LANSING 15 Ju-7 Aug 1964, 1 alata, in sticky trap in bean field (Zett coll—JOP det). ITHACA (FOREST HOME) 2 Ju 1958, on *Lonicera xylosteum* (John Graham coll); 2 Nov 1963, "accidental" on *Delphinium alatum* (LLP coll—MacG det).

LI: GREENPORT 2 JI 1961, in seedheads on *Heracleum maculatum*; 9 JI 1961, 11 Aug 1963, 5 JI 1964, 6 Aug 1965, many on *Cicuta maculata* (MDL det latter with query—"unguis only a little longer than base of V"); 26 Sept 1963, common on *Sium suave* (MacG det). ORIENT 28 Oct 1964, 1965, on *Lonicera tartarica*. MATTITUCK 22 May 1961, on *L. semperflorens*. All LI colls by RL.

Hyadaphis pseudobrassicae (Davis) Turnip Aphid
Formerly in *Rhopalosiphum*

European workers have called this *Hyadaphis (Lipaphis) erisimi pseudobrassicae* (Davis).

OSWEGO Co 3 JI, 21, 28 Aug 1964, alatae, in MT (Gonz coll—JOP det). NORTH LANSING 15 Ju-1 Aug 1964, about 85 alatae, on sticky traps in bean fields (Zett coll—JOP det); 28 Ju-16 Aug 1965, 235 alatae; ITHACA 28 Ju-16 Aug, 543 alatae; CANASTOTA 1 JI-19 Aug, 481 alatae—all in sticky traps in bean fields in 1965 (Zett coll—JOP det).

LI: FARMINGDALE 20-26 Ju and 21 Sept, alatae, in MT and 28 Nov 1949, on stock (GVJ coll—LMR det). MASPETH 8 JI 1917, on turnip (Olsen coll); this and the 1938 collection by Hansberry (see NYL p. 392) are the only 2 records of the turnip aphid on turnip in NY. GREENPORT 23 JI 1961, on radish. ORIENT 12 Aug 1964, many on sorghum. All LI colls, except FARMINGDALE by RL.

***Hyalomyzus colinsonii** Pepper

In his letter of 11 Ju 1963, Dr. Hille Ris Lambers suggests that *H. eriobotreae* in the NYL is probably this species.

Hyalomyzus (or Utamphorophora) humboldti (Essig)Formerly *Myzus physocarpi* PepperITHACA 29 Jl 1965, 2 apterae (1 very small), on *Physocarpus opulifolius* (LLP coll.).**Hyalopteroides humilis (Walker)**

Orchardgrass Aphid

LI: ORIENT 15 Nov 1961, 25 Apr 1962, 15 Oct 1963, on *Dactylis glomerata* (RL coll); may be in part *H. pallida* (Theob.). ORIENT 14 Oct 1963, 4 apterae, on *Muhlenbergia schreberi* (RL coll—LMR det).***Hyalopteroides pallida (Theobald)**LI: ORIENT 8 Nov, on *Centaurea cyanæa* and 15 Nov 1961, on *Dactylis glomerata* (RL coll—JOP det); 15 Nov 1961 and 16 Oct 1963, apterae, some may be *H. humilis* (RL coll—JOP det).**Hyalopterus atriplicis (L.)**see *Brachycolus atriplicis* (Linnaeus)**Hyalopterus pruni (Geoffroy)**

Mealy Plum Aphid

SALT POND, N. of TULLY VALLEY, ONONDAGA Co, 10 Jl 1963, on *Phragmites communis* (LLP coll). NORTH LANSING 15 Ju-7 Aug 1964, 108 alatae, in sticky traps in bean fields (Zett coll—JOP det).

SI: CASTLETON CORNERS 1-7 Nov 1960, 26 males, 8 viviparous alatae, in MT (EAR coll—JOP det).

LI: FARMINGDALE 18-25 Jl 1960, 6 alatae; 2-5 Aug 1963, 1 alata, in MT (GVJ coll—LMR det). ORIENT 15 Jl, apterae, in curled top of *Atriplex patula* and 25 Jl 1961, a few mostly immature, on *Phragmites communis* (JOP det); 25 Ju, many on *Prunus maritima* and 21 Ju 1965, very many, 20 Nov 1964, a few and 18 Ju 1966, on *P. hortulana*. SOUTHOLD 2 Jl 1964, 23 Ju 1966, many on *P. hortulana*; 19 Jl 1962, a few, on *Phragmites communis*—all LI except FARMINGDALE are RL coll.**Hyperomyzus pallidus (Hille Ris Lambers)**LOCKPORT 27 Sept 1961, 1 stray alata, *Smilacina racemosa*, 28 Oct 1961, 2 stray alatae, on *Jeffersonia diphylla* and MIDDLEPORT 27 Sept 1961, stray alatae, on *Aquilegia vulgaris* (LLP coll—CFS det). LOCKPORT 15 Oct 1965, on *Saxifraga (Bergenia) crassifolia* (LLP coll—MacG det).

On 11 June 1963, Dr. Hille Ris Lambers kindly commented on my note in connection with this aphid as given in the NYL as follows: "This species was described not from *Sonchus oleraceus* as given in the NY List but from *S. arvensis*, its summer host. Its winter host is *Ribes grossularia* in Europe."

Hysteronoeura setariae (Thomas) Rusty Plum Aphid
OSWEGO Co 1 alata, in MT in 1964 (Gonz coll—JOP det).

SI: CASTLETON CORNERS Oct 1962, 1 alata, in MT (EAR coll—ANT det).

LI: FARMINGDALE 6–20 Oct, 1 alata, 20–27 Oct, 1 male, and 28 Oct–3 Nov 1961, 1 alata, in MT (GVJ coll—LMR det); 20 Ju 1951 or 1956, on *Prunus maritima* (VJ coll—LMR det). RIVERHEAD 11 Jl 1963, on *Panicum clandestinum* (RL coll).

***Iziphya flabella** (Sanborn)

CANASTOTA alatae, in sticky traps Ju–Jl 1964, 1965 (Raymond Louie coll—JOP det). ITHACA 12 Ju–16 Aug, 6 alatae, CANASTOTA 1 Jl–18 Aug, 4 alatae, and NORTH LANSING 9 Ju–16 Aug 1965, 6 alatae, in sticky traps (Zett coll—JOP det).

Kakimia sp.

SI: CASTLETON CORNERS 21 Nov 1960, apterae, on scapes of *Taraxacum officinale* (EAR coll—ATO det).

Kakimia essigi Gillette & Palmer Black-backed Columbine Aphid
OSWEGO Co 28 Aug, 4 Sept 1964, 31 alatae, in MTs (Gonz coll—JOP det). ROCHESTER, 2 Nov 1963 on *Aquilegia* sp. (HLG). NORTH LANSING 15 Ju–7 Aug 1964, 1 alata, in sticky trap in bean field (Zett coll—JOP det). ITHACA 26 Ju 1936, many on *Aquilegia* sp. (MDL coll).

Kakimia purpurascens (Oestlund)

ROCHESTER 1 Jl 1962, 5 Jl 1963, on *Thalictrum dioicum* (HLG coll).

LI: GREENPORT 3 Ju 1963, several apterae, on *T. revolutum* (RL coll).

*?**Kakimia thomasii** (Hottes & Frison)

CANASTOTA, a few alatae in Jl and Aug 1965, in sticky traps (Raymond Louis coll—JOP det with query).

Lachnus salignus (Gmelin) Giant Willow Aphid
Placed by many authors in *Tuberolachnus*.

LUDLOWVILLE 26 Oct 1963, 19 Oct 1965, on bark of *Salix* sp. (LLP coll).

SI: CASTLETON CORNERS 6 Sept, on *S. discolor* and 6 Oct 1961, on *S. nigra* (EAR coll).

Liosomaphis berberidis (Kaltenbach) Barberry Aphid
Formerly in *Rhopalosiphum*

LOCKPORT 27 May 1945, on *Berberis thunbergii* (LLP coll). STAMFORD 7 Jl 1963, a few apterae, on *B. thunbergii* (LWA coll).

Longicaudus trirhodus (Walker)Formerly in *Pergandeidia*

ROCHESTER 1 Jl 1962, 5 Jl 1963, alatae and apterae, 24 Aug 1963, alatae, apterae, and 31 Jl 1965, on *Aquilegia canadensis* (HILG coll). LUDLOWVILLE 24 Aug 1963, alatae, apterae, on *A. canadensis* (LLP coll).

SI: CASTLETON CORNERS 17 Jl 1962, several alatae, apterae, on *Aquilegia* sp. cult (EAR coll).

LI: MATTITUCK 28 Jl 1961, on *A. canadensis* "in patches clustered on both sides of leaves, alatae few" (RI. coll—JOP det). ORIENT 23 Ju 1964, on *A. longissima* "very common, no alatae" and 27 Ju 1964, on *A. coerulea* (RL coll).

Longistigma caryae (Harris)

Giant Bark Aphid

LI: BROOKLYN (PROSPECT PARK) Oct 1951, on sycamore (Armond Lepore coll—MDL det from 4 slides of 2 alatae and 5 apterae in University of Delaware Collection).

Macrosiphoniella spp.

ROCHESTER 22 Jl 1962, on *Anthemis cotula* (HILG coll—ATO det). STAMFORD 2 Sept 1963, on *Achillea millefolium* (LWA coll—ATO det). HOBART (GUN HOUSE HILL) 10 Aug 1963, on *Tanacetum vulgare* (LWA coll—ATO det).

LI: ORIENT 13 Oct 1961, apterae, on *Chrysanthemum morifolium* and 10 Nov 1961, apterae, on *Gaillardia (aristosa) pulchella* (RL coll). GREENPORT 1963, on *Achillea millefolium* (RL coll—ANT det).

*?**Macrosiphoniella (Paczoskia)** sp.

TUG HILL, LEWIS Co, 10 Aug; 7 mi SE of MIDDLEPORT 22 Jl; SOUTH GILBOA, SCOCHARIE Co, 26 Sept; NORTH LANSING 21 Aug; APALACHIN 5 Aug—all on *Anthemis cotula* (LLP coll 1965—MacG det with query).

***Macrosiphoniella abrotani** (Walker)

TUG HILL, LEWIS Co, 10 Aug 1965, on *Anthemis cotula* (LLP coll—MacG det). WILLET, CORTLAND Co, 28 Jl 1965, on *A. cotula* (LLP coll—MacG det). 7 mi SE of MIDDLEPORT, 22, 27 Jl 1965, on *A. cotula* (LLP coll—MacG det). ITHACA 12 Ju–16 Aug 1965, 57 alatae, in sticky traps (Zett coll—JOP det). OSWEGO Co 22–29 Jl 1963, 2 alatae; 21–28 Aug, 8 alatae and 18–25 Sept, 3 alatae—all 1964 in MTs (Gonz coll—JOP det).

Macrosiphoniella absinthii (Linnaeus)

LOCKPORT 22, 27 Jl 1965, abundant on terminals of *Artemisia schmidtiana nana* (LLP coll—MacG det). It is probable that the following record in the NYL refers to this species—*Macrosiphoniella* n. sp.? LOCKPORT 4

Aug 1960, on *Artemisia schmidtiana nana* (LLP coll—CFS det with query).

Macrosiphoniella artemisiae (Fonscolombe)
see *Macrosiphoniella coweni* (Hunter)

Macrosiphoniella coweni (Hunter)

Formerly *Macrosiphoniella artemisiae* (Fonscolombe)

WEST NYACK 12 Jl 1959, apterae, on *Artemisia vulgaris* (Olsen coll—MDL det, teste Stroyan; 2 slides with 11 apterae).

Macrosiphoniella millefolii (De Geer)

BLOODY POND, CORTLAND Co, 17 Aug 1965, on *Chrysanthemum leucanthemum* and *Achillea millefolium*. LUDLOWVILLE 16 Sept 1965, on *A. millefolium*. NORTH LANSING 7 Jl 1965, on *A. millefolium*. VEGA, DELAWARE Co, 29 Jl 1965, on *A. millefolium*, an unusually large coarse plant. SOUTH GILBOA, SCOHARIE Co, 26 Sept 1965, on *A. millefolium* and *Anthemis cotula*. ***Macrosiphoniella tapuskae** (Hottes & Frison)

CANASTOTA, a number of alatae in sticky traps in July 1965 (Raymond Louie coll—JOP det).

Macrosiphum sp.

LI: GREENPORT 7 Ju 1963, immatures, on *Helleborus viridis* (RL coll.—MacG det).

Macrosiphum spp.

ROCHESTER 1 Jl 1962, 2 alatae, 1 mature aptera, 2 small immature apterae, on *Linaria canadense* (HLG coll); 26 Sept 1963 on *Epilobium angustifolium* (HLG coll—ATO det); 20 Jl 1962, 4 alatae, 2 apterae, on *Sonchus asper* (H.G coll—ATO det who comments "need color notes; this is an interesting collection"). ITHACA 30 Ju 1963, on *Chrysanthemum leucanthemum* (LLP coll—MacG det). POUGHKEEPSIE fall 1962, apterae all immature except one, on potted orange plant indoors (GOS coll—LMR det). WEST NYACK 10 Oct 1960 on *Oenothera* sp. (Olsen coll—ATO det).

SI: NATURE TRAIL 30 Nov 1960, on *Cirsium* sp. (EAR coll—ATO det). CASTLETON CORNERS 16 JI 1962, on *Impatiens capensis*, 4 alatae, immature apterae (EAR coll—ATO det who notes "need color notes").

LI: ORIENT 18 Ju 1963, on *Tanacetum vulgare* (RL coll—ATO det).
 BAY VIEW 9 Ju 1963, on *Celastrus scandens* (RL coll—ATO det); 31
 Jl, on *Amaranthus deflexus*, 1 mature aptera and 30 Aug 1965, 6 apterae,
 on *Centranthus ruber* (RL coll); 10 Ju 1964 many apterae, a few alatae,
 on *Corylus americana* (RL coll—LMR det who notes "not coryli Davis").
 GREENPORT 6 Aug 1965, on *Arisaema triphyllum* (RL coll—ATO det).

Macrosiphum agrimonie (Cockerell)

Agrimonia gryposepala was given in the NYL as a food plant for *Macrosiphum euphorbiae* (Thomas). This is based on a misdetermination of the aphid.

LI: GREENPORT, ORIENT 30 Ju 1962 "pupae" and apterae, on *Agromyza gryposepala* (RL coll). RIVERHEAD 11 Jl 1963, 1 slide of 6 apterae, 1 alata made by MDL from *A. gryposepala* but det with somewhat of a query.

Macrosiphum albifronts Essig

Essig's Lupine Aphid

ROCHESTER 25 Aug, 30 Sept 1962 several alatae, apterae, on cult *Lupinus* sp. and on *L. perennis* 19 Aug, 16 Oct 1963 apterae, on cult lupine (HLG coll).

Macrosiphum avenae Fabricius

English Grain Aphid

Formerly widely known as *M. granarium* (Kirby)

Oswego Co 21 Aug 1964, alatae in MT (Gonz coll—JOP det). NORTH LANSING 15 Ju-7 Aug 1964, 28 alatae; 28 Ju-16 Aug 1965, 75 alatae. ITHACA 28 Ju-16 Aug, 53 alatae and CANASTOTA, 29 alatae; all, including N. LANSING from sticky traps in bean fields (Zett coll—JOP det). Lud-

LOWVILLE 4 Jl 1965, 3 apterae, on *Poa trivialis* (LLP coll). STAMFORD 11 Jl 1964, on *Glyceria grandis* (LWA coll).

SI: CASTLETON CORNERS 23 Nov 1963, 5 specimens, on tall bearded *Iris*, probably "accidental" (EAR coll).

LI: FARMINGDALE 13–20 Oct 1960, 1 alata, in MT (GVJ coll—LMR det). ORIENT 21 Jl 1961, "accidental", on tomato (RL coll—JOP det); 12 Ju 1963, on *Secale cereale* (second rec for NY on rye), (RL coll); 12 Ju 1963, on *Galium aparine* (RL coll—MacG det).

Macrosiphum baccharidis Clarke

see *Dactynotus erigeronensis* subsp. *baccharidis* [HRL synonymy in *Hilgardia* 37(15):583, 1966]

Macrosiphum californicum (Clarke)

NORTH LANSING 27 Aug 1966, on *Salix* sp. (LLP coll).

LI: GREENPORT 29 Jl 1962, on *S. humilis* (det ATO); 19 Ju 1963 several apterae, on *S. nigra*; 29 Jl 1962, 16 Jl 1963, 10 apterae, several mature, on *S. discolor*. BAY VIEW 25 Ju 1961 1 aptera, on *S. nigra*. ORIENT 27 Ju 1965, about 40 apterae, on *S. caprea* (all RL coll).

About the latter collection Latham writes: "The *Salix caprea* is a small tree in our yard which I grew from a slip from a greenhouse in GREENPORT. I set it out in 1958—the year I got this aphid for you for the first time. This willow has escaped and grows wild near the GREENPORT woods but is rare. I have never found any aphids on these."

Macrosiphum carpinicola Patch

MCLEAN RESERVATION, TOMPKINS Co, 2 Jl 1963, about 45 apterae from very young to several matures, on very young leaves of *Carpinus caroliniana* (LLP coll). WILD FLOWER PRESERVE, SLATERVILLE, 2 apterae, on *C. caroliniana* (LWA coll). ITHACA 1 Jl 1964, a number of apterae, on *C. caroliniana* (LLP coll). DOWNSVILLE, DELAWARE Co, 29 Jl 1965, on *C. caroliniana* (LLP coll—MacG det).

Dr. M. E. MacGillivray [Ann. Ent. Soc. Am. 61 (2):341, 1968] has erected a new genus, *Neocorylobium*, to receive this species.

***Macrosiphum coryli** Davis

LI: ORIENT 15 Jl 1962, about 15 apterae, on *Corylus americana* growing in a woods and 21 Jl 1963 (RL coll—ATO det); 10 Jl 1964 many apterae, a few alatae (RL coll—LMR det as *Macrosiphum* sp. "definitely not *coryli*").

Macrosiphum crataegi (Monell) Four-spotted Hawthorn Aphid
In the NYL this species was placed in *Amphorophora*.

LI: GREENPORT 23 Jl 1961; 24 Ju 1962; 24 Sept 1963; 4 Aug, 22

Sept, 15 Oct 1964; 15 Oct 1965—all on *Crataegus crusgalli* (RL coll). ORIENT 1 Ju 1965, on *C. oxyacantha* (RL coll).

Macrosiphum dirhodum (Walker)
see *Metapolophium dirhodum* (Walker)

Macrosiphum euphorbiae (Thomas) Potato Aphid

The potato aphid is here recorded from 28 plants of which 16 are new for NY. These latter are marked with an asterisk.

OSWEGO Co 21, 28 Aug 1964, alatae, in MT (Gonz coll—JOP det). LOCKPORT 17 Nov 1959 is the collection of this aphid given in the NYL on *Senecio cruentus* (in error for *S. vulgaris*) ; LLP made the collection who commented "aphids covered with film of ice when collected but active when ice melted." DRYDEN 23 Jl 1939, on **Papaver somniferum* (F. H. Butt coll). STAMFORD 1 Nov 1963 a mature aptera, on **Salvia splendens* (IWA coll). ROCHESTER 1 Jl, on **Aquilegia* sp. cult; 21 Jl, on **Apocynum androsaemifolium*; 22 Jl, on *Gladiolus* sp. and 9 Aug 1962, on *Zinnia* sp. (HLG coll); 28 Jl 1963, on **Epilobium angustifolium* (HLG coll—Eastop det with query); 27 Sept 1966, on *Senecio vulgaris* (HLG coll). ITHACA 5 Oct 1962, on *Iris* sp. and 2 Nov 1963, on **Delphinium elatum* (LLP coll); CORNELL CAMPUS 27 Sept 1963, on **Salvia farinacea* (LLP coll). LUDLOWVILLE 31 Aug 1963, on *Amaranthus retroflexus* (LLP coll—MacG det); 20 Aug 1964, on seed pods only of *Apocynum cannabinum* (LLP coll). POUGHKEEPSIE summer of 1962, on *Iris* sp. (GOS coll); Jl 1964, on *Rosa* sp. (GOS coll); 12 Sept 1964, 16 Jl 1965, a number of alatae, on *Petunia* sp. (GOS coll). Fall of 1962, a number of apterae, on a potted orange plant in house (GOS—LMR).

SI: CASTLETON CORNERS 19 Nov 1960, on *Aquilegia* sp.; Nov 1961, 1963, 6 Jl 1964 May, Nov 1962, on bearded **Iris* sp. (EAR coll). FIRE ALARM 20 Aug 1961, 1 alata, in MT (EAR coll).

LI: FARMINGDALE 20 Oct–2 Nov 1960, 1 alata; 22–31 May, 14 alatae, 4–12 Jl, 1 alata, 14–20 Sept, 1 alata, 19–23 Aug, 2 alatae, 36 Sept, 1 alata—all 1963 in MTs (GVJ coll—LMR det). EAST MARION 1962, on **Bidens discolor*. PECONIC 20 Jl, on *Asclepias syriaca* and 25 Jl, common on potatoes (JOP det). GREENPORT 30 Jl 1962, on *Agrimonia gryposepala* (ATO det); 26 Sept 1963, several apterae, on **Polygonum hydropiper*. M. pseudorosae is a synonym MacGillivray [Ann. Ent. Soc. Am. 61 (2): 338, Mar 1968].

LI: ORIENT 5 Ju 1966, on *Geum virginianum* (RI. coll—MacG det).

Macrosiphum pechumani Macgillivray

This striking looking aphid with milky white body and black head, antennae, cornicles and cauda was described by Dr. M. E. MacGillivray in the Canadian Journal of Zoology 44:1085–1088, 10 figures, Nov 1966. The material from which the species was described is as follows:

MIDDLEPORT 19 Sept 1960, apterous viviparous and oviparous females, on *Smilacina racemosa* (LLP coll). LOCKPORT 18 Sept 1960 and 11 Sept 1964, apterous and alate viviparous females, on *Smilacina racemosa* (LLP coll). ROCHESTER 4 Sept 1964, alate viviparous females and alate males, on *Convallaria majalis* (HLG coll); 1 Oct 1963, oviparous females from *Hibiscus* sp. (HLG coll); 26 Oct 1963, alate male and oviparous females from *Fragaria virginiana* (HLG coll); 24 Aug 1965, alate males from *Pyrola elliptica* (HLG coll).

Not included in the above paper are: ITHACA, CORNELL CAMPUS 13 Oct 1965, fairly common on *C. majalis*, apterae only and no alatae developed in the laboratory (LLP coll—MacG det Oct 1966); also 18 Oct 1966, apterae only (LLP coll).

About the aphids Mr. Gibson found in Sept 1964 on his *convallaria*, he wrote me as follows: "For about 30 years there has been a bed of lily-of-the-valley, measuring approximately 1½ x 12 feet, alongside my house. It is fertilized every spring and the haulm burnt every year. Aphids have never been noted previously when I have pulled off the berries each year to keep them from children. When the aphids were collected there was 'standing room only' all over the plants, on both surfaces of the leaves, but the plants were not being damaged. By counting the leaves per square foot, measuring average area of leaf covered and estimating number of large and small aphids per square inch, I arrived at a figure of one million aphids in this small bed."

Mr. Gibson further comments: "I have *Smilacina racemosa*, *S. stellata*, *Clintonia borealis*, *Maianthemum canadense*, *Polygonatum commutatum*, *P. biflorum* and *Streptopus amplexifolius* (all members of the lily-of-the-valley family). I don't recollect ever seeing any aphid on them—and they were all searched in my collecting years."

In her paper Dr. MacGillivray states that specimens were examined by Dr. Hille Ris Lambers. He doubted that *C. majalis* was its preferred host since that plant is native to Europe and this aphid does not occur there and that *Smilacina racemosa* is more likely to be the original host.

****Macrosiphum pseudocoryli* (Patch)**

LUDLOWVILLE 10 Jl 1965 and DANBY 5 Jl 1965, on *Ostrya virginiana* (LLP coll—MacG det).

***Macrosiphum pseudodirhodum* Patch**

See *Acyrtosiphon pseudodirhodum* (Patch)

On April 5, 1966, Dr. Pechuman wrote me that he has found in Dr. Griswold's correspondence that she had reared parasites from this aphid which were determined by A. B. Gahan as the braconid, *Ephedrus incompleta* (Prov.) and the pteromalid, *Asaphes americana* (Girault).

In the NYL is the following record; *Macrosiphum* n. sp. near *pseudodirhodum* Patch: ITHACA 16 Ju 1939, on *Spiraea latifolia* (T. R. Hansberry coll—several, slides in CU Coll). In July 1961 LMR noted that "this appears to be *M pseudodirhodum* Patch but we have no examples of this species and it is not recognizable from the description." ATO has since seen these slides and believes them to represent a n.sp. near *pseudodirhodum*.

GUNHOUSE HILL, HOBART, 6 Jl 1963, 1 slide made with 2 adult apterae, on *Spiraea latifolia* (LWA coll—MDL det). It is presumed this collection represents this same n. sp.

LUDLOWVILLE 31 Aug, on *Impatiens pallida*, 10 Sept 1963, on *I. biflora* (LLP coll—MacG det with query). OSWEGO Co 3 Jl 1964, alata, in MT (Gonz coll—JOP det with query). It is believed that the "query" as to the specific identity of each record should be ignored.

****Macrosiphum ptericolens* Patch**

TONAWANDA INDIAN RESERVATION, ERIE Co, 18 Jl, 19 Aug, 3 Sept, 8 Oct 1960, on *Pteridium aquilinum* var. *latiusculum* (LLP coll—ATO det). NORTH LANSING 15 Ju—7 Aug 1964, 54 alatae, in traps in bean fields (Zett coll—JOP det with query). TURTLE POND, SAVANNAH, 25 Ju 1964, abundant on *Osmunda regalis*; "Two other species of ferns were growing so close that the fronds touched but they had no aphids." (LLP coll—MacG det with query). Myzocallis discolor (Monell) Eastern Dusky-winged Oak Aphid

This aphid has only been recorded a few times in NY—once at ITHACA on white oak and, once each time, on LONG ISLAND at MASPETH on *Quercus prinus*, BABYLON on *Q. marilandica*, GREENPORT on *Q. stellata* and SOUND AVE on *Q. bicolor*—but presumably always only in moderate numbers.

During the summers of 1962 and 1963, John H. Brower studied populations of this aphid at the BROOKHAVEN NATIONAL LABORATORY at UPTON, LONG ISLAND. A section of the surrounding oak forest was subjected to chronic gamma radiation and it was found that populations as high as several hundred of this aphid per leaf were common on damaged leaves. This occurred only on white oaks. Although there were other oaks in the area (*Quercus coccinea* *Q. velutina* and *Q. ilicifolia*), only a few nymphs were observed on these species. Several hundred trees were involved. Aphids were over 250 times more abundant in the area receiving a chronic dose of 9.5 roentgens of gamma radiation per day than at radiation levels below 6.0 r/day. In untreated stands of the forest this species was apparently absent.

At the point of highest radiation intensity the rather startling figure of 350,000 aphids per square meter of forest was attained. A sum of 10.5 million aphids was calculated for an area of forest just under 6 acres.

The specific physiological changes in the host plant, which probably caused the tremendous increase in aphid numbers, are not known. A likely hypothesis is the greater availability of soluble amino acids and

possibly other substances which may be present in higher concentration in radiation-damaged leaves because of mobilization for transport.

The detailed account of this phenomenal situation has been published by G. M. Woodwell and J. H. Brower entitled "An Aphid Population Explosion Induced by Chronic Gamma Irradiation of a Forest," in Ecology 48(4):680-683, 1967.

LI: ORIENT 13 Jl 1966, 1 nearly mature aptera, on *Ajuga reptans* (RL coll—MDL det with query).

Myzus cerasi (Fabricius)

Black Cherry Aphid

LI: RIVERHEAD 16 Ju 1961, on *Prunus cerasus*; ORIENT 17 May 1963, in curled leaves of *P. avium*; 3 Ju 1965, many on *P. avium* attended by the ant, *Prenolepis imparis* (Say); 18 Jl 1966, on *P. avium* (all RL coll).

Myzus hieracii (Kaltenbach)

see *Nasonovia ribisnigri* (Mosley)

Myzus ligustri (Mosley)

What proved to be the first record of this aphid as an injuries species in NEW YORK is the following: "Unspecified species (of aphids) numerous on ornamentals, especially on California privet." [N. Y. Wkly Rpt June 7 in CEIR 15, (25):653, 18 Ju 1965]. In substantiation of this report Warren T. Johnson of Cornell sent me a vial containing many specimens collected 21 Jl 1965 by him at WEST HAMPTON BEACH, LONG ISLAND, on the property of Mrs. John Graham on a California privet hedge which he stated was heavily infested. This hedge bordered the sidewalk on two sides for a distance of approximately 800 feet. Another infestation was found not far away at a "sand dune" apartment house right on the ocean front and was quite heavy; the foliage was yellow and curled and stunted. This hedge was laid out in a circular pattern with a total of about 60 linear feet. A further statement is: "Continues to be a problem on privet in SUFFOLK COUNTY; causing yellowing and curling of leaves." [N.Y. Wkly Rpt Aug 9 in CEIR 15, (34):978, 20 Aug 1965].

Myzus lythri (Schrank)

Mahaleb Cherry Aphid

ROCHESTER 1 Jl 1962, on *Lythrum salicaria*; 28 Jl 1963, 23 Oct 1966, on *L. alatum* (Eastop det); 31 Jl, 24 Aug 1965, alatae, apterae, on *L.*

salicaria (all HLG coll). NORTH LANSING 15 Ju-7 Aug 1964, 55 alatae, in traps in bean fields and ITHACA 12 Ju-16 Aug 1965, 7 alatae, in the traps (Zett coll—JOP det); 28 Aug 1964, many in all stages on *Lythrum* cult var (LLP coll). LUDLOWVILLE 6 Sept 1965, on *L. salicaria* (LLP coll—MacG det).

LI: RIVERHEAD 11 Jl 1963, on *Decodon verticillatum* (RL coll).

Myzus persicae (Sulzer)

Green Peach Aphid

Following is a list of the 66 food plants of the Green Peach Aphid recorded in this paper. Of these 38 plants are entirely new aphid food plants for NEW YORK and 14 of their genera are new; 37 of the plants (marked with an asterisk) have not been previously recorded for *M. persicae* in NEW YORK. Only 9 of the plants have been collected on more than once; a numeral preceding such plants indicates the number of collections from each.

**Alliaria (alliaria) officinalis* (garlic-mustard), **Alternanthera* sp., (3) *Athaaea rosea* (hollyhock), *Amaranthus retroflexus* (pigweed), **Beta vulgaris* (beet), *Brassica napobrassica* (rutabaga), *B. oleracea* (*acephala*) var. *viridis* (kale), *B. o. gonglyoides* (kohlrabi), *B. rapa* (turnip), (2) **Calendula officinalis* (pot marigold), *Callistephus chinensis* (China aster), (2) *Capsicum frutescens* (redpepper), **Centaurea americana* (starthistle), **C. vochinensis*, **Chrysanthemum morifolium* (florists' chrysanthemum), **Cleome spinosa* (spiderflower), **Cynoglossum officinale* (common hounds-tongue), **Datura aborea* (angel's trumpet), (3) **D. meteloides* (sacred datura), **D. stramonium* (jimsonweed or thornapple), *Dianthus caryophyllum* (carnation), *Dodecatheon* sp. (American cowslip), **Emilia sagittata* (tasselflower), *Erysimum repandum*, *Gerbera* sp., **Helichysum bracteatum* (strawflower), **Helleborus niger* (black hellebore), *Hibiscus esculentus* (okra), *Ipomoea purpurea* (morning glory), *Lactuca sativa* (garden lettuce), **L. s. capitata* (head lettuce), **Lavatera trimestris* (herb treemallow), **Linum grandiflorum* (flax), **Lunaria annua*, *Lychnis dioica*, **Malope trifida grandiflora*, **Malva moschata* (musk mallow), **M. neglecta* (common mallow), **M. robusta*, *Martynia louisiana* (devil's claws), **Myosotis scorpioides* (true forget-me-not), **Paulownia tomentosa* (princess tree), **Petunia violacea*, **P. vulgaris*, **Philadelphus coronarius* (mockorange or syringa), **Phytolacca americana* (pokeweed), *Polanisia graveolens* (stinking clammyweed), **Portulaca oleracea* (common purselane), (2) *Prunus avium* (sweet cherry), (2) *P. cerasus* (sour cherry), *P. domestica* (plum or prune), *P. maritima* (beach plum), (4) *P. persica* (peach), (9) *P. serotina* (black cherry), *P. seiboldii* (Siebold cherry), *P. yedoensis* (yoshima cherry), *Pyracantha coccinea*, **Senecio cruentus* (common cineraria), *Solanum dulcamara* (bitter nightshade), *S. melogena* (eggplant), (3) *S. tuberosum* (potato), *Spinacia oleracea* (spinach), *Stellaria media* (chickweed), **Tagetes tenuifolia* (striped marigold), **Teuchium candense* (American germander), **Tithonia rotundifolia* (scarlet

tithonia), **Trollius* sp. (globeflower), *Tulipa* sp., *Vinca* sp. (periwinkle), **Viola odorata*, *Zinnia elegans* (common zinnia).

Early records of the green peach aphid in NEW YORK—The earliest record I can find refers to its occurrence on LONG ISLAND and is as follows:

"The greenfly (*Rhopalosiphum dianthi*) has occurred in destructive numbers on turnips and in a few cases on cabbage and especially on kale." (F. A. Sirrine in 14th Ann Rept N.Y. (GENEVA) Agr Exp Sta for 1895, p. 602, 1896).

SHERIDAN 23 Jl 1905, on *Polanisia graveolens* and FREDONIA 17 Jl 1905, on *Amaranthus retroflexus* (Hayhurst coll.).

LI: MASPETH 7 Nov 1913, on cult radish, 26 Oct, 1 Nov 1914, on *Prunus serotina* and 15 Oct, on kohlrabi (Olsen coll.). MINEOLA 24 Sept 1914, on cabbage (?MDL coll.).

1917—IRONDEQUOIT 17 Jan, on garden lettuce in greenhouse (MDL coll.). LI: MINEOLA 9 Oct, on turnip (MDL coll.).

1918—LI: 13 Nov, on kale (C. Burkhardt coll) and FOREST HILLS (S. Danzinger coll) and 14 Nov (L. C. Griffith coll), on Savoy cabbage. S. OZONE PARK 28 Oct, on spinach (Jacob Boos coll.). WOODHAVEN 31 Oct, on horseradish (H. Richter coll.).

1919—LI: OYSTER BAY 5 Mar, on *Vinca* sp. and 4 Mar, on carnation and VALLEY STREAM 5 Mar, on lettuce—all in greenhouse and MDL coll.

The USDA's Insect Pest Survey files contain many reports during the 1920's and 1930's of the occurrence and economic status of the green peach aphid on various fruits and vegetables in the more important producing counties of WESTERN N. Y., the HUDSON RIVER VALLEY and on LONG ISLAND. These were based on observations made by the County Spray Service Specialists of the N.Y. State College of Agriculture.

Detailed records of recent collections of the green peach aphid are as follows:

Oswego Co Ju-Sept 1963, 985 alatae, in MTs and Ju-Sept 1964, 7249 alatae, in MTs (Gonz coll—JOP det). ROCHESTER 21 Jl, on *Datura stramonium* (MDL det), on *Trollius* sp., cult (LMR det), 9 Aug, on *Zinnia* sp., 5 Oct 1962, on *Paulownia tomentosa*, and 18 Oct 1963, on *Lychnis dioica* (Eastop det); also 14 Sept on *Althea rosea* and 4 Jl 1963, 3 aptera, on *Erysimum repandum*—(all HLG coll) STAMFORD 5 Oct immatures, on *Malva moschata* and *M. neglecta* (MacG det) and 7 Oct 1963, a few apterae, on *Calendula officinalis* (LWA coll). LUDLOWVILLE 31 Aug 1963, apterae, on *Myosotis scorpioides* and 16 Ju 1964, alatae, apterae, on *Chrysanthemum morifolium* (LLP coll). North Lansing 15 Ju-7 Aug 1964, 42 alatae and 28 Ju-16 Aug 1965, 30 alatae, in traps in bean fields. CANASTOTA 1 Jl-19 Aug 1965, 31 alatae, in traps in bean fields and ITHACA 28 Ju-16 Aug 1965, 168 alatae, in traps in bean fields (all Zett coll—JOP det). ITHACA 30 May 1928, on *Tulipa* sp. (Griswold coll); 4 Feb 1966, on leaves of a pot of *Crocus* sp. being forced, indoors, and on

14 Mar it was reported that all parts of the plant above ground had been killed by the aphids (W. T. Johnson coll)—the only other collection I know of on *Crocus* is by Griswold on stored bulbs 27 Oct 1927 at ITHACA; 7 Ju 1963 on CORNELL CAMPUS, on *Dodecatheon* sp. (LLP coll); 20 Nov 1964 apterae noticed on a blossom of *Helleborus niger* which had been brought indoors several days before (LLP coll); on CORNELL CAMPUS 2 Nov 1963, 2 apterae, on *Alternanthera* sp., 18 Aug 1966 (LMR det); on *Datura meteloides* and 22 Nov 1966 on *Helleborus niger* (LLP coll); 10 Ju 1964, apterae, on pansies in a garden causing flower distortion (W. T. Johnson coll)—first N.Y. collection of an aphid on pansies.

"Numerous on peppers and other crops in Niagara County." [N. Y. Wkly Rpt Aug 30 in CEIR 15(37):1070, Sept 10 1965].

Nearctaphis bakeri (Cowen) Clover Aphid

Formerly in *Anuraphis*

Oswego Co 10 Jl, 4 Sept 1964, alatae in MT (Gonz coll—JOP det). NORTH LANSING 15 Ju-7 Aug 1964, 8 alatae, 9 Ju-16 Aug 1965, 22 alatae; ITHACA 12 Ju-16 Aug, 19 alatae and CANASTOTA 1 Jl-16 Aug 1965, 4 alatae, in sticky traps (Zett coll—JOP det).

LI: FARMINGDALE 6-20 Oct 1961, 1 alata, in MT (GVJ coll—LMR det). ORIENT 9 Ju 1962, many on *Trifolium pratense* (MacG det); 30 Ju 1966, on *T. pratense* (RL coll). GREENPORT 30 Ju 1966, on *T. hybridum* (RL coll).

Neoceruraphis viburnicola (Gillette) Snowball Aphid

Formerly in *Anuraphis*

NORTH LANSING 1 Ju 1963, many in curled leaves of *Viburnum recognitum* (LLP coll).

LI: GREENPORT 30 Ju 1962, on *V. acerifolium* and 1 Jl 1965 on *V. dentatum* (RL coll). ORIENT 20 Oct, 6 Nov 1963, many alatae, apterae, on *V. opulus* and *V. dentatum* and 17 May, 1 Jl 1965, on *V. opulus* (RL coll).

Neoprociphilus aceris Monell

C. F. Smith and John Graham [Ann. Ent. Soc. Am. 60(1):67-72, 1966] have shown that *N. attenuatus* (Osborne & Scurrine) is a synonym of this species.

LI: GREENPORT 26 Aug, 11 Sept 1964, many on *Smilax herbacea* (RL coll). ORIENT 3 Sept 1964, 31 Jl 1965, many ("flocculent") on *S. herbacea* and 31 Jl 1965 "under leaves, none on stems, very woolly" (RL coll).

***Neosymydobius** n. sp.

ITHACA 26 Jl 1937, on *Quercus montana* 2 slides in CU Coll and maybe 2 others sent to Granovsky (Griswold coll—Granovsky det).

***Neosymydobius americanus** (Baker)

RENSSELAERVILLE 28 Sept, on *Betula papyrifera* (LLP coll—Ole Heie det.).

Neotoxoptera violae (Pergande)

Violet Aphid

Probable synonyms are *Micromyzus formosanus* Takahashi and *M. oliveri* Essig.

In the NYI under *M. formosanus*, I referred to 5 slides (probably Griswold coll) in the C U Coll 12 Feb 1926, on onion in Plant Path greenhouse, CORNELL UNIVERSITY. I stated that since these did not seem to fit the description of *formosanus* I sent 2 slides of 1 alata each (these were the only alatae) and 1 slide with 4 apterae to Prof. Essig for his opinion. This was done in about 1960. He wrote these were never received by him. I further stated that the specific identity of this aphid therefore remains uncertain.

Thinking that these slides must be in the collection of the late Prof. Essig's collection, I wrote on 1 Feb 1964 to Dr. Hille Ris Lambers (at that time a visiting Professor in the Dept. Entomology, Univ. Calif.) asking if he could find these slides and give me his opinion. On Feb 7 he replied as follows:

"After much searching I located in the Essig Collection 3 slides with the data you mentioned in your kind letter of 1 Feb. The insects are what Essig described as *oliveri* Essig notwithstanding the question mark which Essig added to his identification."

Ovatus crataegarius (Walker)

Mint Aphid

LUDLOWVILLE 20 Aug 1964, a few apterae, on *Mentha canadensis* (LLP coll). POUGHKEEPSIE Jl 1963 about 2 dozen apterae, all sizes including several alatoid nymphs; Jl 1964, 15 apterae; 12 Sept 1964; 12 Jl 1965 a few apterae; 30 Jl a few apterae and 24 Nov 1966 numerous apterae—all on spearmint (all GOS coll).

LI: EAST MARION 15 Oct 1963, a few apterae, on *M. arvensis*. ORIENT 6 Jl 1961, 7 Aug 1962, 11 Oct 1963, and 27 Oct 1965, a few apterae, alatae, on *M. rotundifolia*; 14 Sept 1962, 28 Sept 1963 and 28 Oct 1965, a few apterae, on *M. longifolia*; 4 Oct 1962 many alatae, apterae, on *M. piperata*; 1 Nov 1961 a few apterae, on *M. citrata*; 28 Sept 1963 and 8 Nov 1965, scarce on *M. spicata*. All LI colls by RL.

***Paducia antennata** (Patch)

NORTH LANSING 9 Ju–16 Aug 1965, 1 alata, in sticky trap (Zett coll—JOP det.).

***Papulaphis sleesmani** (Pepper)

Formerly in *Macrosiphum*

LUDLOWVILLE 4 Jl 1965, on *Adiantum pedatum* (LLP coll—MacG det.).

Pemphigini

LI: BAY VIEW 9 Ju 1963, a number of apterae, on *Lysimachia quadrifolia* (RL coll—MacG det.).

Pemphigus bursarius (Linnaeus)

Oswego Co 3 Jl 1964, alatae, in MT (Gonz coll—JOP det). NORTH LANSING 15 Ju–7 Aug 1964, several alatae, in sticky traps (Zett coll—JOP det).

Pemphigus populicaulis Fitch Poplar Leafpetiole Gall Aphid

Oswego Co 10 Jl 1964, alata in MT (Gonz coll—JOP det). NORTH LANSING 15 Ju–7 Aug 1964, several alatae, in sticky traps (Zett coll—JOP det). ITHACA 24 Ju 1965, on *Populus deltoides* (Zett coll—JOP det).

Pemphigus populitransversus Riley Poplar Petiole Gall Aphid

CROWN POINT 19 Jl 1963, in galls on cottonwood with 1 presumably predaceous anthocorid bug, *Anthocoris musculus* (Say) (LLP coll—J. L. Herring det). Oswego Co 3, 10 Jl, 28 Aug 1964, alatae, in MT (Gonz coll—JOP det). "Frequently reported from widely scattered locations over State; caused leaf drop. Aphids had not emerged as of July 15." [N. Y. Wkly Rpt in CEIR 14(31):882, 31 Jl 1964].

SI: CASTLETON CORNERS 1–7 Nov 1960, 1 alata, in MT (EAR coll—JOP det).

?Pemphigus populivenae Fitch Sugar-beet Root Aphid

Dr. George G. Gyrisco, Dept Entomology, Cornell University wrote me on 6 Dec 1966 the following: "In 1965 I saw a sugar-beet root aphid colonizing in large numbers in one field near CANOGA. This field was surrounded with poplars, an alternate host. In this particular field, which was weedy and dry, the aphid was actually causing what we felt was economic loss." Unfortunately no specimens were collected so that the identity of the aphid involved is, of course, uncertain.

***Placoaphis siphunculata** Richards

MIDDLEHOPE (near POUGHKEEPSIE) 14 Jl 1959, on *Rubus allegheniensis* (R. H. Converse coll—LMR det). ITHACA 12 Ju 1966, on wild raspberry, *Rubus* sp. (NLH Krauss coll—LMR det).

LI: BAY VIEW 30 Sept 1962, on *R. argutus* (RL coll—LMR det: 2 slides in USNM with 2 apterae each) and 21 Oct 1962, on *R. argutus*, 1 aptera (RL coll—MDL det with query). GREENPORT 20 Ju 1963, on *R. allegheniensis* "on and in top of leaves" (RL coll—LMR det).

***Pleotrichophorus wasatchii** (Knowlton)

Formerly placed in *Capitophorus*

LI: FARMINGDALE 22–31 May, 1 alata and 1–9 Jl 1961, 1 alata, in MT (GVJ coll—LMR det).

Described from UTAH it also occurs in COLORADO. Palmer states that in these two States it is rather common but difficult to detect. Pepper lists it from PENNSYLVANIA. Dr. Jaroslav Holman of Czechoslovakia wrote me on Feb 17, 1966, that he had collected this aphid in Cuba in 1965.

Prociphillus corrugatans SirrineLI: SOUTHHOLD, 1 Ju 1962, on *Amelanchier canadensis* (RL coll).**?Prociphilus erigeronensis** (Thomas) White Aster Root AphidSI: CASTLETON CORNERS 9 Oct 1961, apterae only, on roots of *Taraxacum officinale* (EAR coll—MDL det with query).**?Prociphilus imbricator** Fitch Beech Blight Aphid

"Produces young and buildup has begun (presumably on beech)." [N. Y. Wkly Rpt in CEIR 14(23):584, 5 Ju 1964]; determination is questionable (MDL).

Prociphilus tessellatus (Fitch) Woolly Alder AphidMCLEAN RESERVATION, TOMPKINS Co., 6 Ju 1963, on *Alnus rugosa* (LLP coll).

"Widely and frequently reported this summer from red and silver maples. Infestations heavy and considerable damage resulted. Normally not a serious threat to trees and expected to drop off next year. [N.Y. Wkly Rpt Aug 17" in CEIR 12(63):1002, 1962].

"Light in forested areas of ADIRONDACK MOUNTAINS." no plant given. [N.Y. Wkly Rpt June 15 in CEIR 15(26):692, 25 June 1965].

***Protopterocallis canadensis** Richards

ITHACA 12 Ju–16 Aug 1965, 2 alatae, in sticky traps (Zett coll—Bissell det).

LI: GREENPORT 5 Jl 1965, 2 aptera, on *Carya ovata* (RL coll—Bissell det).**Pseudasiphonaphis anogis** (Hottes & Frison)see *Pseudasiponaphis corni* (Tissot)***Pseudasiphonaphis corni** (Tissot)

Synonymy by A. G. Robinson in Can Ent 99(6):569, 1967.

NORTH LANSING 1964, 61 alatae and 9 Ju–16 Aug 1965, 8 alatae (Zett coll—JOP det). ITHACA 12 Ju–16 Aug 1964, 51 alatae, in sticky traps (Zett coll—JOP det). LUDLOWVILLE 19 Sept 1964, on *Scutellaria latiflora* (LLP coll—MacG det); 4, 13 Jl 1963, on *Pilea pumila* (LLP coll—MacG det); 12 Jl a few and 6 Sept 1965, a number of alatae, apterae, on *P. pumila* (LLP coll—MDL det).

LI: GREENPORT 8 Sept 1964, on *Chelone glabra* (RL coll—LMR det); 25 Aug 1965 "woolly", on *Scutellaria latiflora* (RL coll—MDL det).**Pterocomma smithiae** (Monell) Willow Grove or Black Willow Aphid
ROCHESTER 29 Sept 1963, 26 Sept 1965 and 9 Oct 1966 (a very few)

on *Salix matsudana* var. *tortuosa* and 26 Oct 1963, on *Salix* sp. (HLG col—Eastop det). MICHIGAN HOLLOW, DANBY, 16 Ju 1965, a number in all stages on twigs on *Salix* sp. (LLP coll).

LI: SEAFORD 15 Sept 1957, on *Salix alba* var. *tristis* (GVJ coll—LMR det).

**Rhopalomyzus lonicerae* (Siebold)

OSWEGO Co 26 Ju-3 Jl, 1 alata; 19-26 Ju, 1 alata; 26 Ju-3 Jl, 2 alatae, 3-10 Jl, 1 alata; 7-14 Aug, 2 alatae—all 1964 (Gonz coll—JOP det). ITHACA 12 Ju-19 Aug 1964, 1 alata, in sticky traps (Zett coll—JOP det).

Rhopalosiphoninus staphyleae Koch

OSWEGO Co., FARM P, 19-26 Ju 1 alata and FARM J 3-10 Jl 1964, 1 alata, in MT (Gonz coll—JOP det).

**Rhopalosiphoninus staphyleae* subsp. *tulipellus* (Theobald)

OSWEGO Co 3, 10 Jl 1964, alatae, in MT (Gonz coll—JOP det).

Rhopalosiphum sp.

LI: GREENPORT, 1 Jl 1962, on *Acorus calamus* (RL coll—LMR det).

Rhopalosiphum berberidis (Kaltenbach)

see *Liosomaphis berberidis* (Kaltenbach)

Rhopalosiphum conii (Davidson)

see *Hyadaphis foeniculi* (Passerini)

Rhopalosiphum fitchii (Sanderson) Apple Grain Aphid

OSWEGO Co 4 Sept 1964, alata, in MT (Gonz coll JOP det). "Abundant on ornamental crabapple, hawthorn and *Crataegus*." (This refers to NY and is in CEIR 14(23):584, 5 Ju, 1964).

LI: FARMINGDALE 18-25 Jl 1960, 3 alatae (GVJ coll—LMR det as either *fitchii* or *padi*).

Rhopalosiphum fitchii complex

NORTH LANSING 15 Ju-7 Aug 1964, about 461 alatae, in sticky traps in bean fields (Zett coll—JOP det).

*?*Rhopalosiphum insertum* (Walker)

LI: GREENPORT 25 Ju 1963, scarce on *Acorus calamus* (RL coll—MacG det with query).

Rhopalosiphum maidis (Fitch)

Corn Leaf Aphid

OSWEGO Co 28 Aug 1964, alatae, in MT (Gonz coll—JOP det).

ROCHESTER 30 Sept 1962, in leaf sheaths of *Echinochloa crusgalli* (HLG coll). STANLEY 23 Oct 1962, on sweet corn (HLG coll). ITHACA 20 Jl 1962, on corn (Nault coll—CFS det). NORTH LANSING 15 Ju-7 Aug 1964, 508 alatae; 28 Ju-16 Aug 1965, 929 alatae in sticky traps in bean fields (Zett coll—JOP det). ITHACA 28 Ju-16 Aug 1965, 1806 alatae and CANASTOTA 1 Jl-19 Aug, 1314 alatae, in sticky traps in bean fields (Zett coll—JOP det). SLATERVILLE 7 Aug 1964, on corn (LWA coll).

LI: ORIENT 14 Jl 1966, on *Setaria italica* (RI. coll); 29 Jl 1961, 17 Jl 1962, 10 Jl; 1963, and 31 Jl 1965, many on sweet corn; 15 Oct 1964, 10 Jl 1965, on *Sorghum vulgare*; 17 Jl 1962, 25 Jl 1966, on *Panicum capillare*; 17 Jl 1963, on *P. dichotomiflorum*; 18 Oct 1963, on *Echinochloa crusgalli*; 10 Oct 1966, on *Holcus sorghum* var. *durra*; 19 Sept 1966, 1 aptera, on *Coix lachrymajobi*; 15 Jl 1966, on *Echinochloa crusgalli*, which was "coming up as weed in a big bean field and many of these plants were loaded with the aphids and it was a slimy mess." FARMINGDALE 18-25 Jl (1), 28 Jl-1 Aug (8), 1-8 (4), 8-15 (20), 15-22 (2), 22-29 Aug (42), 29 Aug-8 Sept (3, 8-21 (8), 21-28 Sept (7), 28 Sept-4 Oct (70), 14-1 (35), 13-20 Oct (13) and 20 Oct-2 Nov (1), all 1960; 24 Jl-1 Aug (29) and 27 Sept-6 Oct (1) 1961; 5-9 Aug (6), and 6-9 Sept (1) 1963—all in MT (JVG coll—LMR det). Number of alatae given in parens. LI colls except FARMINGDALE are by RL.

SI: CASTLETON CORNERS 23 Nov 1963, on tall bearded Iris and many alatae, apterae, on *Setaria faberii* (EAR coll).

Rhopalosiphum nymphaeae (Linnaeus) Waterlily Aphid

ROCHESTER 1 Jl 1962, on *Sagittaria latifolia*, 30 Sept 1962, general distribution of all stages, on *S. latifolia*, *Pontederia cordata*, *Calla palustris*, *Nymphaea odorata*, and waterlily cult; also, all stages but only on leaves touching water, on *Lythrum alatum* and *Spiranthes grayi*; 5 Sept 1965, 15 Oct 1966, many apterae, on *Nymphaea odorata*—all HLG coll. MUD POND, OXFORD TWP., CHENANGO Co., 2 Sept 1963, a few on *Pontederia cordata* (LLP coll). TROY 29 Aug 1931, on *Lemna* sp. (Minnie Scotland coll). LUDLOWVILLE 20 Aug 1964, abundant on *Alisma plantago-aquatica* (LLP coll—MacG det).

LI: GREENPORT 21 Ju 1963, on *Leersia (Homalocenchrus) virginica* (RL coll.).

Gibson writes of the 30 Sept 1962 collection: "A storm on 27 Sept blew into my small pond many leaves broken off from *Betula nigra*, *Trillium erectum*, moraine locust, and cultivated blueberry. All but the latter leaves were covered with waterlily aphids in every stage. They appeared to be feeding and did not wander. They were present for at least 2 days after the 30th."

Rhopalosiphum padi (Linnaeus) Oat Bird-cherry Aphid

NORTH LANSING 9 Ju-16 Aug 1965, 127 alatae, in sticky traps (Zett coll—JOP det).

Rhopalosiphum poae Gillette Gillette's Bluegrass Aphid
 ITHACA 12 Ju-16 Aug 1965, 1 alata, in sticky trap (Zett coll—JOP det).

Rhopalosiphum rhois (Monell)
 see *Sitomyzus rhois* (Monell)

Rhopalosiphum rufiabdominalis (Sasaki) Rice Root Aphid
 OSWEGO Co 28 Aug 1964, alata, in MT (Gonz coll—JOP det).

Rhopalosiphum rufomaculatum (Wilson)
 see *Coloradoa rufomaculatum* (Wilson)

Rhopalosiphum serotinae (Oestlund)
 see **Cachryphora serotina** (Oestlund)

***Rhopalosiphum viridis** Richards

NORTH LANSING 9 Ju-16 Aug 1965, alatae (number not given), in sticky traps (Zett coll—JOP det). Known elsewhere only from the type locality in ONTARIO, CANADA, from where it was described in 1960.

Schizaphis graminum (Rondani) Greenbug
 Formerly in *Toxoptera*

NORTH LANSING 15 Ju-7 Aug 1964, 2 alatae and 9 Ju-16 Aug 1965, 10 alatae, in sticky traps (Zett coll—JOP det). ITHACA 1-3 Oct 1959, 3 alatae (W. F. Rochow coll—JOP det).

Schizolachnus piniradiatae (Davidson) Woolly Pine Needle Aphid
 ITHACA "hatching on red pines" [N.Y. Wkly Rpt May 4 in CEIR 14(26):476, May 15, 1965]. "Found on Scotch pine Christmas trees at MARTVILLE, CAYUGA Co., 20 Apr 1965." [N.Y. Wkly Rpt in CEIR 15(19):451, May 7, 1965].

In the NYL is the following record under *Cinara pini* (L.):

LI: GLEN HEAD Ju 1936, on needles of red pine, *Pinus resinosa* (K.E. Maxwell coll—ANT det). Dr. Tissot has recently reexamined the slides on which this record is based and notes to me on 22 Ju 1967 that his original determination was in error and the specimens represent *S. piniradiatae* (Davidson.).

***Semiaphis dauci** (Passerini)

Formerly *Anuraphis carotae* (Koch)

SI: 14 Sept 1943, on crown of carrot roots (M. J. Ramsey coll—Mason det; Special Port Survey by USDA). Not previously recorded from North America. (The aphid is given in the Food Plant List of the NYL under *Daucus carota* (garden carrot) but not mentioned in the List of Aphids.)

Shenahweum minutum (Davis)ITHACA 15 Jl 1962, on *Acer saccharum* (Zett coll—JOP det).**Sipha agropyrella** Hille Ris Lambers

Oswego Co 24–30 Ju, 2 alatae, 8–14 Jl, 2 alatae, 14–21 Jl, 1 alata, 5–12 Aug, 5 alatae and 19–26 Aug, 5 alatae, 1963; 16–19 Ju, 1 alata, 19–26 Ju, 14 alatae, 26 Ju–3 Jl, 16 alatae, 3–10 Jl, 4 alatae, 17–14 Aug, 1 alata, 21–25 Aug, 1 alata, 28 Aug–4 Sept and 2 alatae, 1964—all in MT (Gonz coll—JOP det). NORTH LANSING 15 Ju–7 Aug 1964, 115 alatae, in sticky traps and 28 Ju–16 Aug, 110 alatae 1965, in sticky traps (Zett coll—JOP det). ITHACA 28 Ju–16 Aug, 146 alatae and 1 Jl–19 Aug, 27 alatae, in sticky traps (Zett coll—JOP det); 24 Ju 1965, on *Agropyron repens* (Zett coll—JOP det).

LI: FARMINGDALE 9–14 Ju 1961, in MT (GVJ coll—LMR det).

Sitomyzus rhois (Monell)

Monell's Sumac Aphid

SLATERVILLE, WILDLIFE PRESERVE, 7 Aug 1965, on *Rhus typhina* (LLP coll—MacG det). ROCHESTER 27 Sept 1966, on Japanese sumac (HLG coll).

LI: GREENPORT 23 Jl 1961, on *Rhus glabra* (RL coll—JOP det), 30 Ju, 7 Jl 1962, 23 Ju 1963; SOUTHOLD 25 Ju, 10 Jl 1963; ORIENT 26 Ju, 5 Jl 1962; 17 Ju 1963—all RL coll.

Smynthurodes betae (Westwood)

Has also been identified as *Trifidaphis phaseoli* (Passerini) and *T. radicicola* Essig.

MONROE Co 20 Sept 1965 no plant given (A. A. Muka coll—JOP det with query). CANASTOTA 3 Sept 1965 no plant given, 5 apterae (Muka coll—MDL det with query). BELLONA, YATES Co., 19 Sept 1966, on bean roots, 1 acre in an 8 acre field badly damaged—N.Y. (Geneva) Agr Exp Sta coll, transmitted thru LLP (MDL det).

Dr. Hille Ris Lambers (in litt 11 Ju 1963) comments that the records in the NYL tentatively determined as *Geoica lucifuga* must all refer to this species.

Stegophylla sp.

LI: GREENPORT 22 Sept 1964 woolly aphids, on *Quercus bicolor* (RL coll).

Tamalia coweni (Cockerell)

Manzanita Leaf-gall Aphid

LI: RIVERHEAD 15 Jl 1963, on *Arctostaphylos uva-ursi* (RL coll).**Thecabius** sp.

SI: CLOVE LAKES PARK 30 Aug 1961, several apterae, in curled tips of leaves on *Lysimachia quadrifolia* (EAR coll).

Thecabius populiconduplicifolius (Cowen) Folded-leaf Poplar Aphid

LUDLOWVILLE 17 JI 1966, in tight leaf rolls of *Populus deltoides* and attended by the ant *Formica fusca* L. (D. R. Smith det), (LLP coll—MDL det).

Theroaphis riehmi (Boerner) Sweetclover Aphid

Oswego Co 3 Jl, 24 Aug 1964, alatae, in MT (Gonz coll—JOP det).
 NORTH LANSING 15 Ju-7 Aug 1964, 13 alatae; 28 Ju-16 Aug 1965, 4
 alatae, in sticky traps (Zett coll—JOP det). ITHACA 28 Ju-16 Aug
 1965, 32 alatae and CANASTOTA 1 Jl-19 Aug 1965, 26 alatae, in sticky
 traps (Zett coll—JOP det). ITHACA (CALDWELL FIELD) 7 Sept 1962,
 on *Melilotus alba* (L. R. Nault coll—CFS det).

LI: FARMINGDALE 26-30 Aug 1963, 1 alata, in MT (GVJ coll—LMR det).

Theroaphis trifolii (Monell) Yellow Clover Aphid

NORTH LANSING 15 Ju-7 Aug 1964, about 523 alatae, in sticky traps; 28 Ju-16 Aug 1965, 453 alatae, in sticky traps (Zett coll—JOP det). ITHACA 28 Ju-16 Aug 1965, 443 alatae and CANASTOTA 1 Jl-19 Aug 1965, 157 alatae, in sticky traps (Zett coll—JOP det).

**Toxoptera aurantii* (Fonscolombe) Black Citrus Aphid

LI: HUNTINGTON STATION 19 Jl 1964, on orange, *Citrus sinensis* (W. T. Johnson coll—LMR det).

Toxoptera graminum (Rondani)

see *Schizaphis graminum* (Rondani)

**Trama rara* (Mordwilko) Long-footed Dandelion Aphid

LUDLOWVILLE 3 Aug 1963, on roots of *Taraxacum officinalis* (LLP coll—MacG det). LOCKPORT 14 Aug 1965 several apterae, on roots of *T. officinale* (Henry Pechuman coll—MDL det). ITHACA 12 Ju-16 Aug 1965, 2 alatae, in sticky traps (Zett coll—JOP det).

Tuberculatus ulmifolii (Monell)

see *Myzocallis ulmifolii* (Monell)

Tuberolachnus salignus (Gmelin)

see *Lachnus salignus* (Gmelin)

FOOD PLANT LIST

Plants marked with an asterisk are in addition to those in the New York List; a double asterisk indicates the genus is new.

Abies concolor	White Fir	Acorus calamus	Sweetflag
<i>Mindarus abietinus</i>		<i>Aphis craccivora</i>	
**Abrus precatorius	Rosary Pea	<i>Rhopalosiphum</i> sp.	
? <i>Acyrrhosisphon solani</i>			
<i>Aphis</i> sp.			
Acer sp.		*Adiantum pedatum	Maidenhair Fern
<i>Drepanaphis knowltoni</i>		<i>Macrosiphum ptericolens</i>	
Acer negundo	Boxelder	<i>Papulaphis slesmani</i>	
<i>Periphyllus negundinis</i>			
Acer nigrum	Black Maple	Agrimonia gryposepala	Agrimony
<i>Drepanaphis carolinensis</i>		<i>Macrosiphum agrimoniellum</i>	
Acer platanoides	Norway Maple	Agrimony	see Agrimonia
<i>Periphyllus lyropictus</i>			
Acer pseudoplatanus	Sycamore Maple	Agropyron repens	Quackgrass
<i>Drepanosiphum platanoides</i>		<i>Sipha agropyrella</i>	
? <i>Periphyllus americanus</i>			
<i>Periphyllus lyropictus</i>			
<i>Periphyllus testudinacea</i>		**Agrostis tenuis	Rhode Island Bent
<i>Prociphilus tessellatus</i>	Red Maple	<i>Aphis</i> sp.	
Acer rubrum		**Ajuga reptans	Rosary Pea
<i>Prociphilus tessellatus</i>		<i>Brachycaudus cardui</i>	
Acer (dasycarpum) saccharinum	Silver Maple	? <i>Myzus ajugae</i>	
<i>Drepanaphis</i> sp.			
<i>Prociphilus tessellatus</i>		**Albizia julibrissin var. rosea	Mimosa, cult
Acer saccharum	Sugar or Hard Maple	? <i>Aphis fabae</i>	
<i>Drepanaphis acerifoliae</i>			
<i>Periphyllus americanus</i>			
<i>Periphyllus lyropictus</i>			
<i>Shenahweum minutum</i>		Alder	see Alnus
*Acer spicatum	Mountain Maple	Alfalfa	see Medicago
? <i>Drepanaphis kansensis</i>			
? <i>Drepanaphis spicatum</i>		**Alisma plantago-aquatica	Water Plantain
Achillea lanulosa	Western Yarrow	? <i>Aphis</i> sp.	
<i>Macrosiphoniella millefolii</i>		<i>Aphis nasturtii</i>	
Achillea millefolium	Common Yarrow	<i>Rhopalosiphum nymphaeae</i>	
<i>Macrosiphoniella</i> sp.			
<i>Macrosiphoniella millefolii</i>			
*Achillea millefolium var. rubra		**Alliaria (alliaria) officinalis	Garlic-mustard
<i>Macrosiphoniella millefolii</i>		<i>Myzus persicae</i>	
		Allium cepa	Onion
		<i>Neotoxoptera violae</i>	
		**Alternanthera sp.	
		<i>Myzus persicae</i>	
		Alnus rugosa	Speckled Alder
		<i>Calaphis alni</i>	
		<i>Myzocallis alnifoliae</i>	
		<i>Prociphilus tessellatus</i>	
		*Alnus serratula	
		<i>Myzocallis alnifoliae</i>	

Althea rosea	Hollyhock	Angel's Trumpet	see Datura
<i>Acyrrhosiphon solani</i>			
<i>Aphis gossypii</i>		Anise Root	see Osmorhiza
<i>Myzus persicae</i>			
Alumroot	see Heuchera		
* Amaranthus caudatus	Love-lies-bleeding		
<i>Aphis sp.</i>			Pussytoes
<i>Aphis fabae</i>			
* Amaranthus deflexus			
<i>Aphis gossypii</i>		Dactynotus russellae	
<i>Macrosiphum sp.</i>			
* Amaranthus graecizans	Tumbleweed Amaranth		
<i>Aphis fabae</i>		Antennaria neodioica	Smaller Pussytoes
		<i>Dactynotus russellae</i>	
Amaranthus retroflexus	Redroot Amaranth		
<i>Aphis fabae</i>		Anthemis cotula	
<i>Brachycaudus maidiradicis</i>		Dogfennel or Mayweed	
<i>Macrosiphum euphorbiae</i>		<i>Dactynotus sp.</i>	
<i>Myzus persicae</i>		<i>Macrosiphoniella sp.</i>	
Ambrosia artemisiifolia	Common Ragweed	<i>Macrosiphoniella (Paczoskia) sp.</i>	
<i>Dactynotus ambrosiae</i>		<i>Macrosiphoniella abrotani</i>	
Ambrosia trifida	Giant Ragweed	<i>Macrosiphoniella millefolii</i>	
<i>Dactynotus sp.</i>			
<i>Dactynotus ambrosiae</i>		* Apocynum androsaemifolium	Spreading Dogbane
Amelanchier canadensis	Shadblow Serviceberry	<i>Aphis nerii</i>	
<i>Prociphilus corrugatans</i>		<i>Aphis spiraecola</i>	
* Amelanchier stolonifera		<i>Macrosiphum euphorbiae</i>	
? <i>Macrosiphum macrosiphum</i>			
** Anagallis arvensis	Scarlet Pimpernel		
<i>Aphis gossypii</i>		Apocynum cannabinum	Hemp Dogbane
		<i>Aphis asclepiadis</i>	
Anaphalis sp.	Pearly Everlasting	<i>Aphis nerii</i>	
<i>Dactynotus sp.</i>		<i>Aphis spiraecola</i>	
Anaphalis margaritacea	Common Pearly Everlasting	<i>Macrosiphum euphorbiacae</i>	
<i>Brachycaudus helichrysi</i>			
<i>Dactynotus sp.</i>		Apple	see Malus
<i>Dactynotus ambrosiae complex</i>		Arborvitae	see Thuja
<i>Dactynotus russellae</i>			
** Anemone virginiana	Virginia Anenome	Aquilegia sp.	Columbine
<i>Acyrrhosiphon solani</i>		<i>Kakimia essigi</i>	
		<i>Macrosiphum euphorbiae</i>	
		<i>Longicaudus trirhoda</i>	
		Aquilegia canadensis	American Columbine
		<i>Pergandeidia trirhoda</i>	
		* Aquilegia coerulea	Colorado Columbine
		<i>Pergandeidia trirhoda</i>	
		* Aquilegia longissima	Longspur Columbine
		<i>Pergandeidia trirhoda</i>	
		Aquilegia vulgaris	European Columbine
		<i>Aphis gossypii</i>	

Arctium sp.	Burdock	* Aster divaricatus <i>Aphis</i> sp.
<i>Macrosiphum</i> sp.		
Arctium minus	Smaller Burdock	Aster ericoides Heath Aster <i>Dactynotus paucosensoriatus</i>
<i>Aphis fabae</i>		
Arctostaphylos uva-ursi	Bearberry	* Aster laevis Smooth Aster <i>Dactynotus paucosensoriatus</i>
<i>Tamalia coweni</i>		
Arctotis breviscapa		Aster lateriflorus Calico Aster <i>Dactynotus paucosensoriatus</i>
<i>Dactynotus ambrosiae</i> complex		<i>Dactynotus sonchi</i>
**Arisaema triphyllum	Small Jack-in-the-pulpit	* Aster multiflorus <i>Dactynotus paucosensoriatus</i>
<i>Macrosiphum</i> sp.		
Aronia arbutifolia	Red Chokeberry	Aster novae-angliae
<i>Aphis pomi</i>		New England Aster <i>Dactynotus paucosensoriatus</i>
Aronia melanocarpa	Black Chokeberry	Aster novibelgi New York Aster <i>Dactynotus paucosensoriatus</i>
<i>Aphis pomi</i>		
Arrowhead	see Sagittaria	Aster punicus Swamp Aster <i>Dactynotus paucosensoriatus</i>
Arrow-wood	see Viburnum	Aster simplex <i>Dactynotus crepuscisiniphon</i> <i>Dactynotus nigrotuberculatus</i> <i>Dactynotus paucosensoriatus</i>
Artemisia schmidtiana nana		* Aster tenacetifolia Tansyleaf Aster <i>Dactynotus</i> sp.
<i>Macrosiphoniella absinthii</i>		
Artemisia vulgaris	Mugwort	Aster umbellatus Flattop Aster <i>Dactynotus</i> sp. <i>Dactynotus paucosensoriatus</i>
<i>Macrosiphoniella coweni</i>		
Arum	see Calla	* Aster undulata <i>Dactynotus paucosensoriatus</i>
Asclepias incarnata pulchra	Hairy Swamp Milkweed	Aster, White-topped See Sericocarpus
<i>Aphis asclepiadis</i>		
<i>Aphis nerii</i>		* Atriplex arenaria Seabeach Orach <i>Aphis</i> sp. <i>Aphis fabae</i>
* Asclepias purpurascens	Purple Milkweed	Atriplex patula Orach or saltbush <i>Aphis fabae</i> <i>Brachycaudis atriplicis</i> <i>Hyalopterus pruni</i>
<i>Aphis nerii</i>		
Asclepias syriaca	Common Milkweed	Avens, White see Geum
<i>Aphis asclepiadis</i>		
<i>Aphis helianthi</i>		
<i>Aphis nerii</i>		
<i>Macrosiphum euphorbiae</i>		
* Asclepias syriaca var. <i>alba</i>		Baccharis halimifolia Sea Myrtle
<i>Myzocallis asclepiadis</i>		<i>Aphis coreopsisidis</i> <i>Macrosiphum erigeronensis baccharidis</i>
Aspen	Populus tremuloides	
Aster sp.		
<i>Dactynotus</i> sp.

Collections have also been made from the following plants, but the aphids could not be determined. The collections were sparse; or the aphids were immature or only in one stage. A few were accidentals, although most of them were seen feeding and multiplying. These plants would bear watching in the future; they have not been included in the totals given in the introduction.

***Aralia spinosa*, ***Asarum canadensis* (wild ginger), **Asclepias quadrifolia* (four-leaved milkweed), ***Athyrium filix-femina* (lady fern), **Chelone obliqua* (pink

turtle head), **Chenopodium capitatum* (strawberry blight), *Cornus stolonifera* (red osier dogwood), ***Corydalis sempervirens* (pink fume-root), ***Cystopteris bulbifera* (bladder fern), ***Dicentra eximina* (bleeding heart), *Dipsacus sylvestris* (teasel), **Erigeron peregrinum*, ***Hepatica americana*, *Hypericum* sp., **Oxalis europea*, *Polygonum aviculare* (knot-weed), ***Polystichum Braunii* (Braun's holly fern), ***Polygonum digitalis*, *Rumex acetosella* (sheep sorrel), *Sium* sp., **Thalictrum venulosum*, ***Trillium erectum* (wake robin), and **Viburnum alnifolia* (hobble bush—Thendara, Adirondacks).

Aphids were also collected from the following cultivated plants: Blueberry, camelia (outdoors), confederate violet, geranium Martha Washington, grape Interlaken seedless, *Nicotiana* sp., *Tigridia* sp. and tuberous begonia.

NOTES ON APHID INVASIONS AND EXPLOSIONS

H. Lou GIBSON, FRAS

In this issue Dr. Leonard presents the results of six years of painstaking work in classifying aphids sent to him, preparing slides, arranging for determinations, and compiling collection data. The resulting list is of great value to entomologists. Our members will be interested in becoming aware of the variety of aphids in our state and in scanning some of the notations in his paper. They are urged also to add to their activities in observing nature by looking out for these intriguing insects on trips into fields and woods and even in their own gardens—I have found over 70 different species in mine.

Also I was presented by nature with a small "aphid explosion," which led me to investigate such phenomena and to offer a few observations here on the topic for the general interest of our readers. The salient feature that emerges is the amazing importance of the "balance of nature" in the very existence of the human species. For if only this inconspicuous, squishy little bug could find the conditions to support unchecked breeding, we would all perish—unless we learned to eat aphids!

Most aphids reproduce viviparously during their burgeoning season and then, toward the end of this period of rapid reproduction, they produce eggs that carry over to the next year. The male is not needed for the former phase. Some aphids can produce four live young per day. To arrive at a reasonable figure for illustrating the fecundity of a single aphid, assume that it produces 150 young at the rate of 10 per generation, for 15 generations in one season. I have calculated that if a single rose aphid, multiplying in this fashion, had nothing to interfere with the proliferation of its progeny, its family would total about 3,400,000,000,000,000 at the end of the season. And that is a stupendous mass of waving antennae, legs, and cornicles all bent on sapping the vital juices from our plants.

A fuller appreciation of such a pestilence is gained when it is realized that if this clan could march off into space, stylus to caudum, 65 abreast, the vanguard of the column would reach the sun before the rear guard left the earth. (Most rose growers would bid them God speed.) Huxley once made a similar calculation and found that the weight of an assumed surviving progeny would equal that of the whole human population of China. In other words, one aphid could do in one year what the Chinese have taken almost a million years to accomplish.

Think then of the consequences to agriculturists, were it not for controls of such hordes. To cite an example: In the early part of the growing season, as many as a billion spotted alfalfa aphids per acre were counted in

one region. To put it mildly, this was a disastrous infestation. Controls limit such occurrences. Yet this aphid, apparently introduced from the Mediterranean area to New Mexico in 1954, immediately rampaged across our farms. It spread into 30 states within two years. In 1956 alone it did \$46 million damage.

Its saliva is slightly toxic to the plants; this and the sapping of plant juices hinder the growth. Harvesting the stunted plants is complicated by sticky honeydew all over the stems. (Aphids are tiny living filters; in order to extract sufficient protein from the juices they have to imbibe large quantities; the excess, unused, sugar is excreted.) Honeydew on infested alfalfa can become so thick as to clog harvesting machinery and complicate drying of the hay. In addition, a sooty mold fungus often grows over the plants and thus spoils what little fodder is left standing.

Control measures for the alfalfa aphid are typical of those adopted in the unestimably valuable work of the economic entomologist in subduing other aphids and other insect pests. The "balance of nature" plays an important role. Ladybird beetles are the heroes in combatting aphids. There are many other natural enemies. This balance can be tipped in our favor by seeking natural enemies in the areas where the aphids originated. For example, Mediterranean parasitic wasps have been imported by the U. S. Agricultural Research Service. Colonies are reared in several institutions and released when and where needed. Selective fungi, that infect only the pest, provide another avenue of control.

Weather conditions see-saw between favoring the pest and the natural control. All such balances have existed in the natural state, allowing no species to dominate the earth. With the coming of *Homo sapiens*, however, a new situation arises. Obviously, $3\frac{1}{2}$ billion men cannot go on digging for grubs and roots and eating berries. Organized agriculture is mandatory. However, the first time a man dug a hole in the ground with a stick to plant a seed, the balance of nature was upset. With his gardens and fields his progeny often creates a paradise for the uninhibited proliferation of pests. The planting of vast and healthy alfalfa fields in our southwest are a case in point—the aphids "never had it so good". Inevitably they multiplied and prospered. There seems to be no evidence to suggest this alfalfa aphid was a mutant adapting itself to a new plant; it appears to have been merely opportunistic.

The entomologist has to stand as the balancer on the see-saw of rising and falling infestations. Along with natural controls, which cannot be completely effective, he often has to bias the rising side with the judicious application of additional chemical controls. There are terrific complexities and responsibilities involved. For alfalfa, the right agent and propitious timing have to be adopted in order not to kill predators faster than aphids.

The compounds must not make the alfalfa or the soil unfit. The entomologist can also cooperate with the botanist in producing strains of alfalfa resistant to aphids—unsuitable for the pests but still useful for livestock. Such measures have stemmed this threatening tide of alfalfa aphids. Yet, constant vigilance is required for minimizing the possibility of their resurgence.

There have been similar invasions of other aphids. Several decades ago the green peach aphid became addicted to tobacco. This is quite intriguing in view of the fact that tobacco infusions were once used as an insecticide against aphids. There is some evidence that a new race had developed. Small numbers were collected every year or so in our tobacco-growing states. Again, the aphids had moved into a paradise of lush pastures; however, in this instance, it was almost 40 years before their new lands were flowing with honeydew. The first damage of economic importance did not occur until 1946. The following year, serious outbreaks were reported from the Gulf to Canada and they reached epidemic proportions in the south. In 1948, there was a general epidemic. Many controlling factors have now curbed infestations. Nevertheless, the aphid has necessitated vigilance ever since. So far, the great buildups of the epidemic years have not recurred.

There are, of course, several other species of aphids of economic importance. The frequency of their occurrences has increased with the expansion of their preferred planted acreages. Usually, the invasions have been more gradual than the spectacularly sudden onsets of the alfalfa and peach aphids just discussed. Nevertheless, various aphid population fluctuations can sometimes rise to disastrous proportions.

In 1942, the greenbug destroyed 61 million bushels of grain in Texas and Oklahoma. During 1950 in the latter state, the pests kept 138 crop-dusting planes from 56 companies and 44 licensed ground units busy. And in spite of an expense of 1.3 million dollars, about 22 percent of the wheat planting, 19 percent of the oats, and 37 percent of the barley had to be abandoned. The acreage harvested gave low yields. Losses, in millions of bushels, for wheat, oats, and barley were, respectively about 22, 2, and 0.8. The dollar loss for wheat alone was well over 42 million. The aphid continues to be a formidable threat in grain growing states.

In New York aphids are perennial pests, particularly on apple, cabbage, and potato. The rosy apple aphid can make as much as 90 percent of a crop unusable in a localized epidemic. Cabbage fields often have to be plowed under because of the damage caused by cabbage aphids. The potato aphid, and sometimes the buckthorn aphid, ruin vast quantities of potatoes. To their own depredations they add the spreading of potato diseases.

The most noteworthy warning in New York of the devastation threatened by uncontrolled aphid invasions, is the forced abandonment of hops as a

commercial crop in our state. Around 1860, the hop aphid, whose limited existence had been well observed, suddenly exploded into our hop fields. Natural controls did not check the hordes and other control methods were not very far advanced at that time. By the turn of the century, the large-scale growing of hops had become hopeless here and the crop had been transferred to Pacific Northwest.

Up to this juncture, we have been considering widespread invasions of aphids that flow across our crops like high tides. Another intriguing aspect of aphid vitality is the occurrence of the more localized explosions; these can be looked upon as tidal waves. Fortunately, most of them seem to be automatically self-limited or reduced by known and unknown factors. Such tidal waves can occur in localized farm regions. For example, during 1965 in Illinois, the corn leaf aphid surged over 55,000 acres, doing enormous damage. It is this type of buildup, however, that most often comes to the attention of urbanites, who, unlike farmers and entomologists, are not perennially faced with serious aphid problems.

There are numerous newspaper accounts of small groups of city shade trees suddenly raining honeydew. Streets become slippery, and cars are "tarred and feathered" with falling leaves glued on by hardening honeydew. The difficulties, dilemmas, and narrow margins in aphid control have been emphasized by some of these reports. Sprayed trees are often more heavily affected than untreated ones. Obviously spraying for other pests has been done at just the right time to reduce aphid predators.

Aphid flights of almost sky-darkening proportions frequently occur. In December, 1963, the people of several counties in Alabama became quite alarmed by gusts of flying pine aphids, just ahead of a weather front. Telephone, radio, and television systems were flooded by accounts of the invasion. The giant willow aphid often builds up huge flights. When windows are not closed in time, an unusual form of aphid damage occurs—carpets are ruined by trodden insects.

A few species of aphids feeding on maple stage annual flights as a more normal, regular event. Nevertheless, there are fluctuations in the number of aphids taking part. The early fall flights of *Drepanaphis utahensis* are regular, but in 1961 unusually abundant hordes of them were reported from the Logan Canyon region in Utah. Huge rafts of downed aphids were floating along the river. The only people affected adversely were the fishermen. The fish were so bountifully regaled with live food that catching them on an artificial lure was as hopeless as enticing a cow out of a clover field with a handful of dried hay.

Over the weekend of August 4, 1963, tens of thousands of winged painted maple aphids were blown into my garden. Obviously they occur somewhere in the area, but I have never collected aphids from any nearby maples

—with one exception, to be discussed below. Apparently, conditions for widespread proliferation have not recently been present.

In 1965, a highly localized explosion of the Norway maple aphid occurred in the yard of my next-door neighbor. His sugar maple was entirely infested. Honeydew dripped profusely from the tree and thousands of green leaves dropped. Aphids had not been observed on the tree before, and on that occasion, the Norway maples nearby showed no trace of aphids. Aphids have not appeared since on those trees nor on his previously infected tree. It is interesting to speculate on the reason. In 1964, a sudden blight killed a cherry tree that touched the sugar maple; the former was immediately cut down. Could the rotting root system of the cherry tree have provided abundant humus for the maple and thus made the sap of the latter more attractive to aphids? One of the effects of increased humus would probably be that of decreasing the nitrogen content of the leaves.

Along these lines, a most intriguing aphid explosion was reported in 1967 from the Brookhaven National Laboratory at Upton, New York. Experimental gamma radiation damage was produced in two white oak groves near the laboratory. In 1963, the eastern dusky-winged oak aphid increased to several hundred times its normal population density. No parallel explosion could be found, upon exhaustive search, anywhere in central Long Island. Also, the aphid density was definitely correlatable to the degree of radiation damage to the oaks. The radiation produced changes in the sap composition that favored aphid growth; one change detected was a reduction in nitrogen content. But probably the most puzzling aspect is that similarly damaged oaks were not similarly affected by these aphids in 1961, 1964, or 1965.

One more, extremely localized population explosion is worthy of speculation. The new aphid, *Macrosiphum pechumani* MacGillivray (see page 312) was collected by Dr. L. L. Pechuman in September, 1960 and 1964, on *Smilacena racemosa* and in October, 1965 on lily of the valley; and by me in 1963 on cultivated hibiscus and wild strawberry, in 1964 on lily of the valley, and in 1965 on *Pryola elliptica*. This aphid is so strikingly different from other *Macrosiphum* that it is difficult to understand why it had escaped notice until 1960—unless it is a mutant. The occurrences listed were of moderate numbers of aphids, except my 1964 invasion. Then, in a lily-of-the-valley bed, $1\frac{1}{4}$ x 12 feet, a million aphids were found thriving. (From sample counts and estimation.) The bed has been there for 30 years; it is fertilized and cleaned up in the same way each year. Yet, in 1964 only, it became a favored pasture for these aphids. There have been no aphids on these plants, before nor since. Another newly discovered aphid, *Dactynotus leonardi* Olive, has behaved in a somewhat similar fashion. It was first collected in 1926 by Dr. Griswold. It has been observed several times since then, but always in small numbers. But in 1962, Mr.

John T. Katsanos reported an unusually heavy infestation throughout a single Massachusetts meadow grown up to *Rudbeckia*.

It is apparent that the individually insignificant members of the aphid family can collectively emerge as presenting many mysteries and challenges. When these tiny atoms of Insecta gather for a chain reaction, the explosions pose potentially devastating threats.

I am extremely grateful to Dr. Leonard for giving me access to his notes and reprints for the preparation of this essay.

CITATIONS IN THE ROCHESTER ACADEMY
OF SCIENCE

1967

HOWARD S. MILLER

Fellow

The word amateur seems to have lost its connotation of one whose accomplishments are prompted by love rather than by profit. But returning to the former meaning, it can be said that this candidate is an amateur who has truly achieved the status of a professional scientist. Since 1921, when he first became absorbed in ornithology, he has accumulated a treasure of bird data that would be hard to equal.

A native of Rochester, his interest in biology began at East High School. He is part of the J. Hungerford Smith Company here in Rochester. It is natural then that he is best acquainted with the birds of our area. Nevertheless, he has observed in Florida, Long Island, Massachusetts, New Jersey, and Virginia.

He is an expert on bird calls and songs and has amazing ability to identify distant birds without binoculars. Characteristic silhouettes, flight patterns, and intangible elements activate those special human computer elements that form hunches. He does use binoculars for verification. Yet his sight is so keen that the eagles are worried.

Although scientist enough to insist upon positive details on rare birds and those out of season, he also is diplomat enough to instill respect for such carefulness in his comparisons. The measure of any man is his ability to influence others. Our candidate is an informal teacher. Numberless field trips with Scout and older groups have given him the opportunity to stimulate interest.

In the Genesee Ornithologic Society, of which he is a charter member, and for our Academy, he was statistical chairman for many years. His committee produces monthly lists of noteworthy birds for the Goshawk. He has written numerous articles for this journal, on field identification and occurrence. As Regional Editor for the Kingbird, he has been responsible for reports and compilations from the Rochester area. He has long been Contributing Editor to the Audubon Field Notes.

For giving us insight into the true meaning of amateur, and for inspiring many new ones, we warmly extend to him our Fellowship.

NEIL S. MOON

Fellow

A photographic chemist who is a keen amateur ornithologist, mycologist, pteridologist, geologist, mineralogist, botanist, photographer, and skier, needs one more hobby to get full benefit from his many interests—mountain climbing. Our candidate is such an enthusiast.

With origin in West Virginia, graduation from Pennsylvania State University and a doctorate from the University of Illinois in organic chemistry, he came to the Eastman Kodak Company in 1939. He is now an Assistant Superintendent in the Synthetic Chemicals Division. He holds membership in many honor and professional societies.

He has lectured on birds and plants and has been instructor on field courses and trips, including those of the Rochester Museum of Arts and Sciences and the Alleghany Nature Pilgrimage. His efforts impinge on our Academy through his scholarly approach to his hobbies, particularly ornithology. He is completing his term as President of the Genesee Ornithological Society, and has served on many committees, among them, the one collecting data for the forthcoming New York State bird book sponsored by the Federation of New York State Bird Clubs.

With such varied interests, he will serve our members well now that he is about to take up the presidency.

Just as he has reached the peak in our Academy, he has roamed all the chief mountains in New York and New Hampshire. He has met the challenge of Mount Whitney and climbed in Switzerland and Italy. He brings a similar lofty and broad outlook to his new office.

For demonstrating that a capable scientist can achieve the status of amateur, we are happy to confer on him our honor of Fellow.

HENRY E. PAUL

Fellow

Our next candidate observes the universe in two directions. As a bio-chemist, he uses the microscope to study the effects upon bacteria of medicinal agents he produces. And in his avocation of astronomy, he uses the telescope to scan our environment in space.

As Assistant to the Research Vice-President of the Norwich Pharmaceutical Company, he is involved in developing new drugs, like Furadantin. Coming East from Los Angeles, he studied at Cornell University and was granted his Ph.D. there in 1938, majoring in nutrition and biochemistry.

He has lectured at the Sorbonne on the nitrofurans as chemotherapeutic agents, and he often speaks to student and service groups on medical topics.

He is a member of the Astronomy Section of our Academy. Here, he has been active as a lecturer on telescopes and optical instruments, and their history. His collection of antique telescopes, including some 200 years old, would be difficult to equal. In addition to constructing telescopes, he built five Lyot quartz monochromator filters—exacting optics for studying the sun in a narrow wavelength band.

He contributed several authoritative and practical chapters in the Amateur Telescope Making series, and has written three books on such topics, including photography in outer space. He is in popular demand for consultation and demonstration of sky phenomena—such as Venus masquerading as a flying saucer, or a request to visit him in order to view the mountains on the moon during the dark phase, on a cloudy night, with 3 feet of snow and 10 below zero prevailing.

For helping to enlighten the informed and to inform the unenlightened we welcome him as a Fellow.

UDELL B. STONE

Fellow

The waters of our Earth provide the domain for the professional interests of our next candidate, and the rocks supply the materials for his creative avocation. As District Fisheries Manager for the New York State Conservation Department, he directs activities in studying the distribution, growth, and age of many sport fish, as well as statistical surveys for commercial fishing. Experimental work on the occurrence and control of lamprey infestation is under his supervision. His group makes many recommendations for stream improvement, environmental control, stocking, and legislation.

Born in Spencerport, his studies at the University of Rochester and doctoral work in vertebrate ecology at Cornell University prepared him for his profession in aquatic biology. He is active in ichthyological, limnological, and fisheries societies. He has done valuable research and writing on the life histories of fresh-water fishes.

His chief interest in our Academy has been in the Mineral Section. He has been Vice-President and served untiringly in other capacities. He is a Fellow of the Rochester Museum of Arts and Sciences and is Past Chairman of the Rochester Lapidary Society. Artistic talents first found

outlet in painting and photography. Now, to the enjoyment of collecting gem stones he has added the satisfaction of cutting and polishing them.

For his capableness in professional and hobby activities and his willingness to work for the general good and share his knowledge with others, we are proud to bestow our Fellowship upon him.
